D'VersiBIT® System

A new twist to an old problem.

These flexible steel drill bits are the right tools for installing wire or cable inside existing walls.

It bends to meet your needs!

Fishing wire or cable through existing walls used to be frustrating and time-consuming, but the D'VersiBIT® has made it as simple as bowing the spring steel shaft in the direction you want to drill and turning on the power. Proven in the field to deliver accurate and professional results in many applications. Bits range from 3/16" to 1" (4.8 to 25.4 mm) in diameter and in shaft length from 12" to 72" (304.8 to 1828.8 mm).

The D'VersiBIT® System makes it possible to easily accomplish even complex installations. This patented system attaches a quality drill bit to a long flexible spring steel shaft. When used with the Placement Tool, this flexibility makes it possible to easily manipulate the bit within walls. After drilling, attach a D'VersiGRIP to the hole in the drill and pull wire or cable back through the wall.

Placement Tool

- Allows placement of the drill bit at any point within the wall.
- Helpful in judging where the bit will be during drilling to avoid accidentally drilling through the wall.
- Useful for vertical and horizontal placements.

- Operation is non-invasive and does not involve metallic contact so there's no risk of service interruption.
- Simple to use – just place the probe between the pairs in question.
- Differential amplifier saves time by allowing the technician to determine whether the signal is truly present or is an induced signal from adjacent pairs.
- False readings due to noise are virtually eliminated.
- Continuous self test ensures that the unit is functioning properly.
- Emits both visible and audible indication when digital signals are present.

FoPro® Fiber Optic Test Probes

By eliminating the need for specialized connectors, adapters and hybrid jumper cables, FoPro fiber optic probes simplify testing patch panels and the numerous termination types encountered in the field.

- Small, light and cost effective.
- Patented design protects delicate connector endfaces from scratching.
- Anti-rotation grip prevents the probe endface from grinding against the connector endface during a test.
- Eliminates the need to stock numerous hybrid test cable configurations.
- All standard FoPro assemblies are 3 m (9.8') long and come in a protective carrying case.
- A tethered adapter converts the FoPro from a male to female interface for testing to plug connectors as well as testing the "pin" interface of multichannel connectors.

Available in three ferrule configurations:

- FP series for connector applications with 2.5 mm OD ferrules (DIN, E2000, FC, SC, ST, etc.).
- F1 series for connector applications with 1.25 mm OD ferrules (LC, MU, etc.).
- F2 series for MIL-T-29504 /4 and /5 termini applications with 1.57 mm (0.62") OD ferrules.
