# CS23685 Hama Notebook Cooler, USB, transparent

## Description

Give your notebook some breathing space!

It is essential with modern computers that the hot air produced from the components is circulated so that it does not build up and result in overheating and burning or causing it to lead to early failure by being overstressed. With our notebooks being increasingly used at home and in the workplace to store and organise a vast number of various word documents, photos, videos and other such files, you may find after several hours of use, your notebook overheating or burning due to lack of air circulation. This can be a worrying time bearing in mind that if anything happens to the notebook, you may be without a notebook for several days or worse lose substantial amounts of important data you need access to. The USB Notebook Cooler from Hama is your perfect solution, allowing you to use your notebook for hours whilst keeping your notebook at an appropriate temperature and free from overheating.

The USB Notebook Cooler from Hama, suitable for nearly all notebooks and with an elegant look, is designed with the latest technology to help keep your notebook cool with low rotational speed, due to the two 60 mm fans and hardly perseptive operating noise. Easy to use, with no rubber drivers and superb blue LEDs, simply plug the device into your notebook USB Port via the USB cable included and enjoy a cooler notebook. In addition, the Notebook Cooler, USB comes with built in inclination and secure rubber feet so you can work comfortably whilst keeping your laptop cool!

## Highlights

- For cooling notebooks
- Excellent cooling capacity thanks to two 60 mm fans
- With blue LEDs
- Power supply via USB port
- Comfortable working thanks to inclination
- Easy to install
- No drivers needed
