Dimension	136.6 x 70.6 x 8.6 mm, 133g

Designed for humans

Effortlessly smart and intuitively simple, Samsung Galaxy S III is a new smartphone concept. It is the most human mobile device ever made. It Sees, Listens, Responds. It's personal. But it's for everyone. And it marks an incredible new generation of mobile phones.

Smart thinking - Adapting to the way you surf

Smart Stay - The GALAXY S III automatically recognizes when you are looking at the phone, whether it is to read an e-book or browse the web. The front camera looks deep into your eyes and maintains a bright display.

Direct Call - When you are messaging someone and decide to call them instead, simply lift the phone to your ear and Direct call will dial their number for you. No more fumbling through call logs or contacts.

Pop-up Play - Picture-in-picture technology lets you watch a video and do other tasks, like sending emails, or surfing the web at the same time.

S-Beam - Lets you bond instantly so you can transfer documents, contacts, pictures, music, videos, you name it. Just put the backs of your phones together, connect, share and enjoy.

What makes it more human?

Social Tag - Social tag lets you link the faces in your photo album with their social media streams. Once it's set, all you have to do is look at their pictures and you'll see their current status appear.

Smart Rotation - The Samsung GALAXY S III sees where your eyes are and rotates the screen to match, so it's always where you want it to be.

Best Photo - The GALAXY S III can take first of eight shots at once and then recommends the best one. Increasing the chance of a great shot every time.

S-Cloud - Access and share all your music, videos and pics anywhere in the world with your own virtual storage system with up to 5GB free.

S-Voice - Why not get a response from your phone? Tell it to wake up! Even better, you can tell GALAXY S III to turn off the alarm for a few minutes and let yourself sleep a bit more. Answer your phone (or reject a call), turn your music up.

Smart alert - When you pick up your phone, the GALAXY S III gives you a brief vibrating nudge to inform you about missed calls and new messages.

AllShare Play - There's another way to share content on various devices. It's called AllShare Play, and it lets us work together through the magic of DLNA and Wi-Fi Direct, giving us remote access to documents and multimedia files when we work on a different screen somewhere else.

Wifi Display - Wi-fi display allows you to mirror what's on your phone to nearby devices like your TV.

Buddy Photo-share - The phone recognizes faces and links those for you, using your group profiles for guidance.

AllShare Cast - Wouldn't it be nice to mirror your phone display onto a big screen wirelessly? Now you can.
