	1/4		3.9 (206.12)	4.0 (215.93)	4.2 (225.75)	3.8 (206.12)
Weight			0.14kg			
Accessories(options)			Bracket (DXT152-25-1A) with screws			
Electrical entry			DIN connector			
Voltage	AC(50/60Hz)		100, 200, 24*, 48*, 110*, 220*, 240*			
	DC		24, 6*, 12*, 48*, 100*			
Allowable voltage			–15% to +10% of rated voltage			
Apparent power (4) (5)	AC	Inrush	12.7VA (50Hz) 10.7VA (60Hz)			
		Holding	7.6VA (50Hz) 5.4VA (60Hz)			
Power consumption (4) (5)	DC		Without light: 4.8W, With light: 5W			
Indicator light and surge suppressor	AC		ZNR (Varister), Neon lamp			
	DC		Diode, LED (Neon lamp for 100V or more)			

* Option

Note 1) Based on dynamic performance test JIS B8374-1981. (Coil temperature 20C°, at rated voltage, without surge voltage suppressor.)

Note 2) Impact resistance: No malfunction resulted from the impact test using a drop impact tester. The test was performed on the axis and right angle directions of the main valve and armature, for both energized and de-energized states.
Vibration resistance: No malfunction occured in a one-sweep test between 45 and 1000 Hz. Test was performed at both energized and de-energized states to the axis and right angle directions of the main valve and armature. (Value in the initial stage.)

Note 3) This is the value for single valve. For manifolds, refer to "Manifold Specifications" on p.2.5-5.

Note 4) The value is different for continuous duty style (VT307E), and energy saving style (VT307Y/W).
Refer to "Option Specifications" on p.2.5-2.

Note 5) At rated voltage.

Option Specifications

Continuous Duty Style: VT307E

Exclusive use of VT307E is recommended for continuous duty with long time loading.

⚠ Caution

1. This model is for continuous duty, not for high cycle rates. But even in low cycle rate, if energizing valve more than once a day, consult SMC.
2. Energizing solenoid should be done at least once in 30 days.

Specifications different from standard are as follows.

Apparent power/AC		Inrush	7.9VA (50Hz), 6.2VA (60Hz)		
		Holding	5.8VA (50Hz), 3.5VA (60Hz)		
Power consumption/DC		2W, 2.2W (With indicator light)			
Response time (1)		30ms or less (0.5MPa)			
Effective area mm² (Nℓ/min)	Port size	P→A	A→R	A→P	R→A
	1/8	2.4 (127.6)	2.1 (107.97)	2.3 (117.78)	2.1 (107.97)
	1/4	2.6 (137.41)	2.4 (127.6)	2.6 (137.41)	2.4 (127.6)

Note 1) Refer to p.2.5-1.

Energy Saving Style: VT307Y (VT307W)

If low power consumption is required for electronic control, "VY307Y"(2WDC) is recommended.

Specifications different from standard are as follows.

Power consumption/DC		2W*, 2.2W (With indicator light)			
Response time (1)		25ms or less (0.5MPa)			
Effective area mm² (Nℓ/min)	Port size	P→A	A→R	A→P	R→A
	1/8	2.4 (127.6)	2.1 (107.97)	2.3 (117.78)	2.1 (107.97)
	1/4	2.6 (137.41)	2.4 (127.6)	2.6 (137.41)	2.4 (127.6)

*100V DC: 2.4W

Note 1) Refer to p.2.5-1.

Vacuum Style: VT307V (VT307W)

This vacuum model has less air leakage than the standard model under low pressure.

⚠ Caution

Since this valve has slight air leakage, it can not be used for vacuum holding (including positive pressure holding) in the pressure container.

Specifications different from standard are as follows.

Operating pressure range	–101.2kPa to 0.1MPa

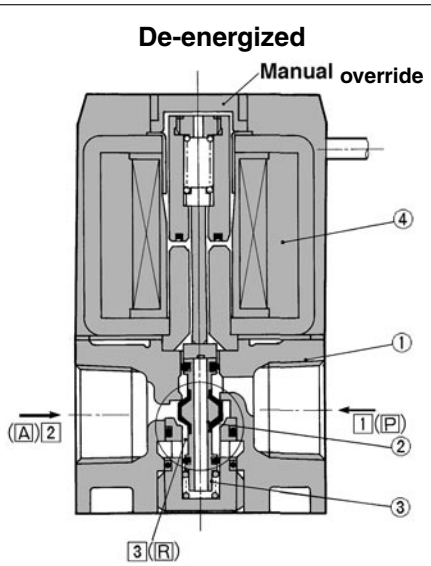
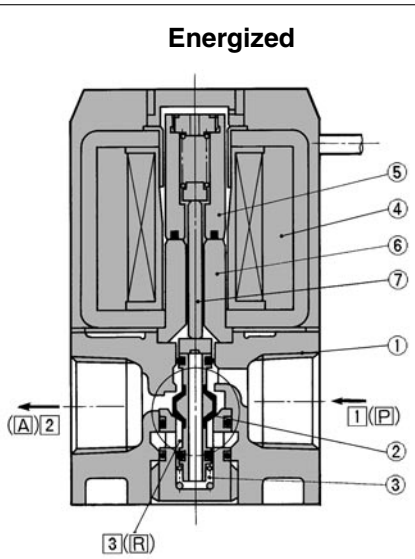
⚠ Protective class class I (Mark:⏚)

Construction





Operation principles

<De-energized>

Spool valve ② is pushed upward by the return spring ③, port [P] is closed, and then port [A] and port [R] are opened.

Air flow direction:

Port [P] ⟷ Block, [A] ⟷ [R]

<Energized>

When an electric current is applied to the molded coil ④, the armature ⑤ is attracted to the pole ⑥, and through the push rod ⑦, it pushes down the spool valve ②. Then port [P] and port [A] are connected. At this time, there will be gaps between the armature ⑤ and the pole ⑥, but the armature will be magnetically attracted to the pole ⑥.

Air flow direction:

Port [P] ⟷ Port [A], Port [R] ⟷ Block

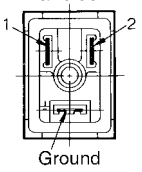
Component Parts

No.	Description	Material	Notes
①	Body	Aluminum die cast	Color: Platinum silver
②	Spool valve	Aluminum, NBR	
③	Return spring	Stainless steel	
④	Molded coil	Resin	

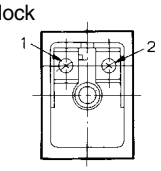
Wiring

DIN connector (with indicator light and surge voltage suppressor) are connected inside as in the figure below. Connect to the corresponding power supply.

DIN connector with terminal block



Terminal with terminal block



Terminal No.	1	2
DIN Terminal	+	–
Terminal	+	–

- Applicable cable O.D.
  Type T: ø4.5 to ø7mm
  Type E: ø2.3 to ø2.8mm
  Type D: ø4.5 to ø7mm
- Applicable crimp terminal
  Type E/T: 1.25-3, 1.25-3S
  1.25Y-3N, 1.25Y-3S

(Round or "Y" shaped crimped terminals can be not used for type "D".)

Lead Wire Colour

Voltage	Colour
100V AC	Blue
200V AC	Red
DC	Red (+), Black (–)
Others	Gray

⚠ Precautions

Be sure to read before handling. Refer to p.0-33 to 0-36 for Safety Instruction and common precautions.

⚠ Caution

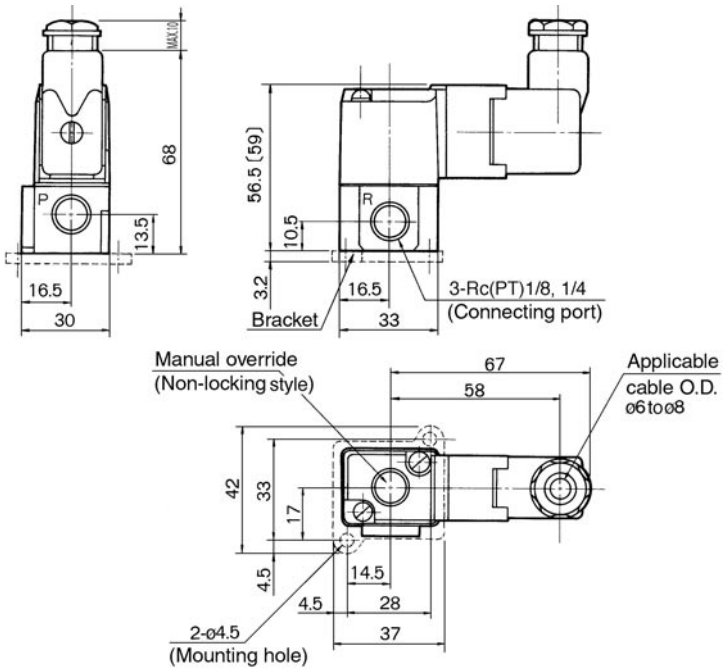
1. Make sure that dust and/or other foreign materials should not enter the valve from the unused port such as exhaust port. Also, since there is a bleed port for the armature in the manual override part, do not allow accumulation of dust and/or other foreign materials to block bleed port.

How to Calculate Flow Rate

Refer to p.0-36 for the calculation of flow rate.

Dimensions (Interchangeable with “VT301” for mounting.)

DIN connector: VT307-□D



[ ]: With indicator light and surge voltage suppressor

Series VT307
Manifold

VT307 manifold is B mount style and available both as a common exhaust and individual exhaust model.

Manifolded valve can be easily converted from N.C. normally closed to N.O. normally open merely by turning over the switch cover.

VV307-01-052-F

VV307-01-063-□-F

Specifications

Manifold	B Mount

Description	Part No.
Blank plate (with gasket, screw) (1)	DXT060-51-13$^{A}_{B}$

Accessories

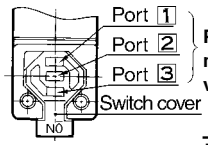
Description	Part No.
Switching plate (with gasket) (1)	DXT152-14-1$^{A}_{B}$
Mounting screw (2)	NXT013-3

Note 1) "DXT060-51-13B" and "DXT152-14-1B" are for long time loading.
Note 2) For mounting single solenoid valve for manifolds.

⚠ Caution

Changing from N.C. to N.O.

This product is delivered as N.C. valve.
If N.O. valve is needed, remove mounting screws of the required valve and turn over the switching plate. (Make sure that there are gaskets on both sides of the plate.)
Then, tighten the mounting screws to fix the valve to the manifold base.



Port positions for manifold solenoid valve body.

Figure: N.C.

Function	Switching plate
N.C.	No mark
N.O.	NO

⚠ Precautions

Be sure to read before handling. Refer to p.0-33 to 0-36 for Safety Instruction and common precautions.

Mounting

⚠ Caution

①Each valve is fixed to the manifold base with two M4 mounting screws. Tighten the screws evenly when re-mounting.
②For mounting, tighten M4 or equivalent screws evenly into the mounting holes of the manifold base.
Tightening torque of the mounting screw (M4): 1.4Nm

Piping

①For the common exhaust style, pressurization or evacuation of the R-port can cause malfunction.

* Option

Note 1) Based on dynamic performance test JIS B8374-1981. (Coil temperature 20C°, at rated voltage, without surge voltage suppressor.)

Note 2) Impact resistance: No malfunction resulted from the impact test using a drop impact tester. The test was performed on the axis and right angle directions of the main valve and armature, for both energized and de-energized states.

Vibration resistance: No malfunction occured in a one-sweep test between 45 and 1000 Hz. Test was performed at both energized and de-energized states to the axis and right angle directions of the main valve and armature. (Value in the initial stage.)

Note 3) This is the value for single valve. For manifold type, refer to "Manifold Specifications" on p.2.5-12.

Note 4) At rated voltage.

Option Specifications

Continuous Duty Style: VT317E

Exclusive use of VT317E is recommended for continuous duty with long time loading.

⚠ Caution

1. This model is for continuous duty, not for high cycle rates. But even in low cycle rates, if energizing the valve more than once a day, consult SMC.
2. Energizing solenoid should be done at least once in 30 days.

Vacuum Style: VT317V

This vacuum model has less air leakage than the standard model under low pressure. It is recommended for vacuum applications.

⚠ Caution

1. Since this valve has slight air leakage, it can not be used for vacuum holding (including positive pressure holding) in the pressure container.

Specifications different from standard are as follows.

Operating pressure range	–101.2kPa to 0.1MPa

⚠ Precautions

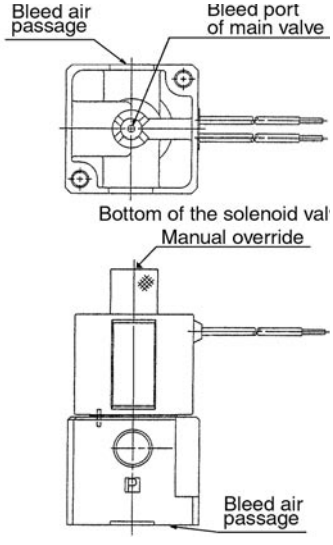
Be sure to read before handling. Refer to p.0-33 to 0-36 for Safety Instruction and common precautions.

⚠ Caution

1. A bleed port for the main valve is located at the bottom of the solenoid valve. Since blocking it causes malfunction, do not block it.

* When mounted on the metallic surface, bleeding is normally done from the bleed port through the bleed groove, but when mounted on an elastic surface, elastic shape deformation may close the port.

2. Make sure that dust and/or other foreign materials should not enter the valve from the unused port such as exhaust port. Also, since there is a bleed port for the armature in the manual override, do not allow accumulation of dust and/or other foreign materials to block bleed port.



How to Calculate Flow Rate

Refer to p.0-36 for the calculation of flow rate.

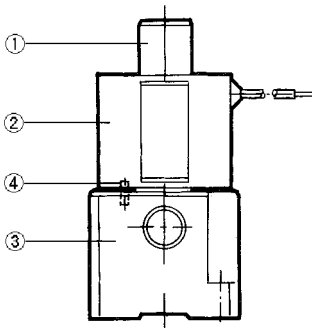
⚠ Caution

Change of Electrical Entry Angle

1) Series VT317 can change electrical entry angle. (4 positions)

2) How to change:

Loosen the nut ①, remove the coil ② from the body assembly ③, place the positioning pin ④ at the required place, put back the coil ② to its place, and tighten sufficiently with lock nut ①.

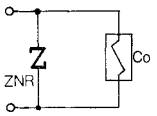


Indicator light and surge voltage supressor

2) DC

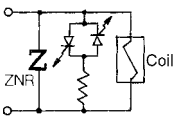
DIN connector/Conduit terminal

• With surge voltage suppressor (S)

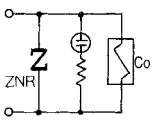


• With indicator light and surge suppressor (Z)

48V DC or less

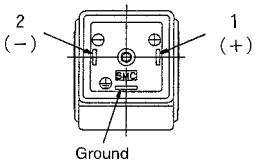


100V DC



Wiring

DIN connector is connected inside as in the figure below. Connect to the corresponding power supply.



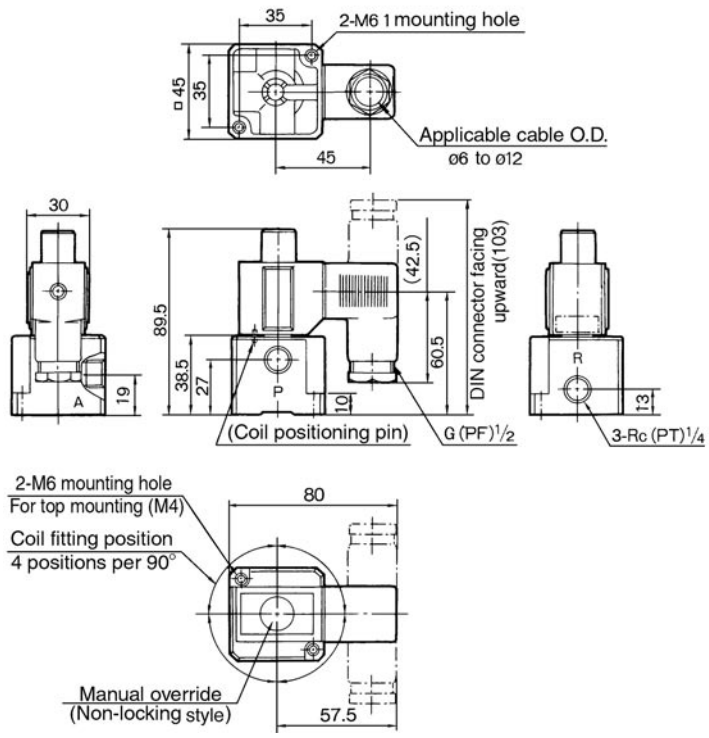
• Applicable cable O.D.
ø6 to ø12

Note) For those with an external measurement of ø9 to ø12, remove the inner portion of the ground gasket before using.

• Applicable crimping terminal
The maximum size for the round terminal is 1.25mm²-3.5 and for the Y terminal is 1.25mm -4.

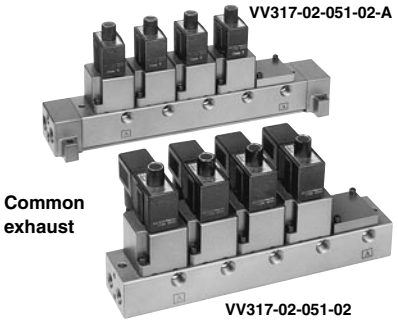
Dimensions (mm)

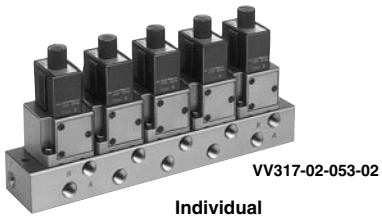
DIN connector: VT317-□D



Series VT317
Manifold

VT307 manifold is B mount style and available both as a common exhaust and individual exhaust model.





Specifications

Manifold style	B Mount
Max. number of stations	20 (1)
Applicable solenoid valve	VO317□-□□□ (3)-Q

Exhaust		Port location (piping)/Port size			Effective area (mm²) (N ℓ/min)
Code	Style	P	A	R	
1	Common (2)	Base (side) 1/4 (3/8)	Base (side) 1/4	Base (side) 1/4 (3/8)	10 (549.64)
3	Individual	Base (side) 1/4	Base (side) 1/4	Base (side) 1/4	

Note 1) If operating with 3 valves or more, apply supply pressure to both of the P ports of the manifold. The common exhaust style should exhaust from both of the R ports.
Note 2) In the case of common exhaust type, R and P ports size can be 3/8 by using a mounting adaptor.
Note 3) Can also be applied to Series VVT320 manifold.

⚠ Caution

Changing from NC to NO

Universal porting permits convertibility NC/NO by a simple 180-degree rotation.

Exhaust \ Valve	N.C.	N.O.
Common exhaust		Individual exhaust		
*) Changing from NC to NO
This product is delivered as N.C. valve.
If N.O. valve is needed, remove mounting screws of the required valve and turn the valve at 180 degrees. (Make sure that there are O rings fixed on 4 positions of the valve surface.) Then, tighten the mounting screws to fix the valve to the manifold base.

⚠ Precautions

Be sure to read before handling. Refer to p.0-33 to 0-36 for Safety Instruction and common precautions.

Mounting

⚠ Caution

① Each valve is fixed to the manifold base with two M4 mounting screws. Tighten the screws evenly when re-mounting. Tightening torque of the mounting screw (M4): 1.4Nm
② For mounting, tighten M4 or equivalent screws evenly into the mounting holes of the manifold base.

Ambient and fluid temperature	5 to 50°C
Max. operating frequency	5Hz
Response time (1)	30ms or less (at 0.5MPa)
Effective area (Nℓ/min) (2)	27mm² (1472.25: 3/8), 25mm² (1374.1: 1/4)
Lubrication	Not required (Use turbine oil class 1 ISO VG32 for lubrication)
Manual override	Non-locking push
Impact/Vibration resistance (3)	150/50 m/s²
Enclosure	Dust proof

Note 1) As per JIS B8374-1981 (Coil temperature 20°C, at rated voltage, without surge suppressor)
Note 2) Value for valve unit. It varies in case of manifold. Refer to p.2.5-18 for manifold specifications.
Note 3) Impact resistance: No malfunction from test using drop impact tester, to axis and right angle directions of main valve and armature, each one time when energized and de-energized. (Initial value)
Vibration resistance: No malfunction from test with 45 to 1000Hz 1 sweep, to axis and right angle directions of main valve and armature, each one time when energized and de-energized. (Initial value)

Solenoid Specifications

Electrical entry			DIN connector	
Coil rated voltage			100 and 200 VAC, (50/60Hz), 24VDC	
Allowable voltage			–15% to +10% of rated voltage	
Apparent power (3)	AC	Inrush	50Hz	75VA
			60Hz	60VA
		Holding	50Hz	27VA
			60Hz	17VA
Power consumption (3)	DC		12W	

Note 3) At rated voltage

Option Specifications

1.For vacuum

Pressure range	–101.2kPa to 0.1MPa

In contrast to the standard product, this vacuum specification valve has less air leakage at low pressures, a feature that should be taken into consideration when using this valve for vacuum applications.

⚠ Caution

1)Because this valve leaks air, it cannot be used for maintaining a vacuum (or pressure) in a pressure vessel.

2.Manual override with lock

1) Using a screwdriver, push the manual override button that is located in the head portion of the solenoid valve in order to directry push the spool valve downward, thus causing the valve to switch.

2) With the button remaining pushed down, turn it approximately 90° clockwise or counterclockwise to maintain the manual override locked state.

3) To revert to the original state, keep the button pushed down and turn it approximately 90° clockwise or counterclockwise.

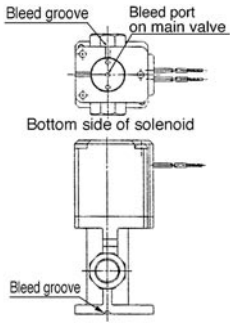
⚠ Precaution

Be sure to read before handling.
Refer to p.0-33 to 0-36 for Safety Instructions and common precautions.

⚠ Caution

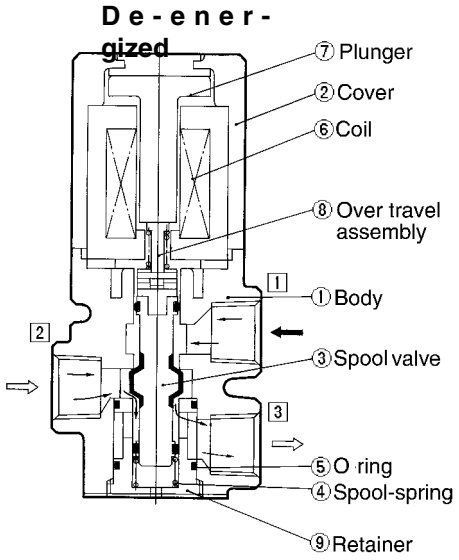
1.The bottom of the solenoid valve has a breather hole for the main valve. Take proper measures to prevent this hole from being blocked as this will lead to a malfunction.

* **Ordinarily, when the solenoid valve is mounted on a metal surface, it can breathe through the breather hole, via the breather groove, However, in particular, if the surface to be mounted is made of rubber, the rubber could deform and block the hole.**



2. Take proper measures to prevent dust or foreign matter from entering through unused ports.
The grommet portion contains a breather hole for the core. Take proper measures to prevent dust or foreign matter from accumulating in this area.

Construction



Operation principles

<De-energized>

The spool ③ is pushed upward by the force of the spring ④ and the air passage between port 2 and port 3 is opened and port 1 is blocked.

Air flow direction: 1 ⟷ Block, 2 ⟷ 3

<Energized>

When the coil ⑥ is energized the plunger ⑦ is pulled down depressing the spool ③ via the overtravel assembly ⑧ and the air passage between port 1 and port 2 is opened and port 3 is blocked.

Air flow direction: 1 ⟷ 2, 3 ⟷ Block

Parts list

No.	Description	Material	Notes
①	Body	ADC	Platinum silver
②	Cover	ADC	Platinum silver
③	Spool valve	Aluminum, NBR	

How to Use DIN Connector

1. How to wire

1) Loosen the fix screw and pull off the connector from the pin plug.

2) Make sure to pull out the retaining screw before inserting a screwdriver into the groove at the lower portion of the terminal board. Then, push the screwdriver up to separate the terminal board and the terminal cover.

3) Following the wiring procedure, properly connect the wires to the specified terminals.

4) As a rule, wires are connected to the terminals using crimp-style terminals. Therefore, select crimp-style terminals that do not overstrain the terminal hardware.

Wiring figure

Single sole

Terminal block view (⬢)
Connect wires to terminals 1 and 2.
Terminal 3 is not used.

Pin plug

2. Change of electrical entry

Once the terminal cover is separated from the terminal block, it can be rotated in any direction (4 directions, each 90°) to change the orientation of the electrical entry.

3. Caution

To insert the connector into the pin plug or to pull it out, do so as vertically as possible, without tilting.

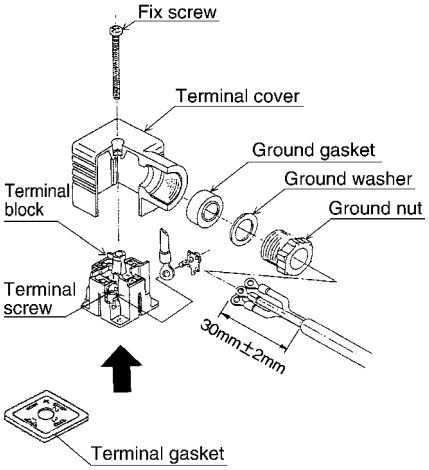
4. Applicable cable

Cord external: ø6 to ø12

Note: For those with external measure ments of ø9 to ø12, remove the inner portion of the ground gasket before use.

5. Applicable crimp-style terminals

The maximun size for the round terminal is 1.25mm^2-3.5 and for the Y terminal is 1.25mm^2-4.



Flow rate

Refer to p.0-36 for flow rate calculation.

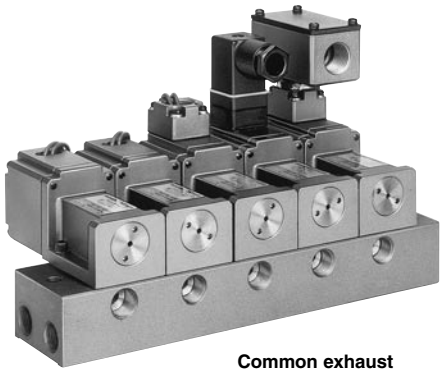
Series VT325
Manifold

VT325 Series Manifold Model has a B-mount style with common exhaust.



Common exhaust

Caution

How to Change from NC to NO

The valves are asembled as NC valves at the time of shipment. By removing the two retaining screws from the desired valves, and rotating each valve body 180° and reassembling it on the manifold base, it is possible to reassemble an NC valve as an NO valve. (When doing so, make sure that a gasket is attached to the mounting surface of the valve.) Properly tighten the screws. The tightening torque of the retaining screws is 3Nm.

Manifold Specifications

Manifold	B-mount
Max. number of stations	17 (1)
Applicable solenoid valve	VO325-00□□-Q

Exhaust port style	Port location/Port size			Piping			Effective area (mm^2) (Nℓ/min)
