Introduction to High Current Card Edge Connectors

Product Facts

■ Contacts on .100 [2.54] Centerlines
■ Selective gold plating of contacts for high performance at low cost
■ Flow solder applications
■ Glass-filled polyester housing is 94V-0 rated
■ Available in vertical, right-angle or straddle PCB-mount
■ Soldertails for wave solder applications
■ Compliant press-fit PCB tails for solder-less applications
■ 50% to 100% greater current carrying capacity than traditional card edge connectors
■ Accepts double sided PC boards, .054-.070 [1.27-1.78] thick
■ Recognized under the Component Program of Underwriters Laboratories Inc., File No. E28476
■ Certified by Canadian Standards Association, File No. LR 7189

Introduction

The High Current Edge family of connectors provides high reliability and economy in packages compatible with industry standards. While many new card edge connectors for signal applications have moved toward higher density configurations (0.050" and 1 mm centerlines), Tyco Electronics has redesigned the 0.100" standard edge product family to carry more current, for low power distribution.

This product family includes the following:
■ CROWN EDGE Products
■ Standard Edge Connector — 2nd generation
■ SEC-II Power Products

The connectors serve low durability cycle applications which do not have the available room for a traditional 2-piece power distribution connector. In other applications, a low-profile connector is needed to allow for better airflow / less airflow restriction.

This grouping of power card edge connectors is focused on providing high current density with the favored multi-point contact design which reduces contact interface resistance.

The connectors were used originally in the ISA Standard for computer expansion cards. Today these connectors are being used in applications such as: DC-to-DC converters, low-wattage power supplies, industrial grade card extenders and general low cost I/O applications requiring durable/rugged card edge contacts. The improvements made still allows use in the original applications and they provide a lower resistance connection due to the high conductivity contacts plated with a minimum 30 micro inches gold.

The options include vertical or right-angle PCB mounting as well as straddle-mount configurations for co-planar PCB applications.
Introduction to High Current Card Edge Connectors (Continued)

CROWN EDGE Connector
- Design based on CROWN BAND technology
- 35A per power contact
- True hot-plug power modules
- Flexible modular design
- Mates with .062 [1.6] thick card edge or bus bar tab

SEC-II Connectors
- Provides high reliability in packages compatible with industry standards for double-sided printed circuit boards
- Uses signal style contact
- High IACS copper alloy contacts available to improve current carrying capability
- Accepts double-sided boards .054 [1.27]-.070 [1.78] thick
- Maximum number of dual positions
  - .100 [2.54] Centerlines — 70 positions
  - .125 [3.18] Centerlines — 50 positions
  - .150 [3.81] Centerlines — 31 positions

SEC-II Power Connector
- High current density than high current SEC II
- Uses new MULTI-BEAM style power contact
- Vertical, straddle or right-angle PCB mounting
- 22A (straddle) or 28A (vertical) power contact +3A signal contact
CROWN EDGE Card Edge-style High Current Connectors

Product Facts
- Low cost power solution
- Power, signal and mixed modules
- 35A per power contact
- Mates with .062 (1.6 mm) thick card edge or bus bar tab
- Press-fit or solder tail terminations
- True hot-plug power modules
- Meets regulatory safety requirements
- All CROWN EDGE products in this section are RoHS compliant.

Typical Applications
- Board-to-board power connections
- DC-DC converters
- Uninterruptible Power Supply (UPS)
- Power supplies

CROWN EDGE connectors are a board-to-board power interconnect solution that uses ELCON high performance CROWN BAND contact technology configured to mate directly with a printed circuit board edge or — for higher currents — with a solid bus bar. Power and signal can be combined and mounted end-to-end to meet the requirements of the applications.

Product Highlights
High-current Card Edge Interface
CROWN EDGE connectors use Tyco Electronics proven ELCON CROWN BAND contacts that provide multiple points of contact for high current, and low voltage drop and minimal heat generation. The desired current rating for most applications can be achieved by bussing multiple contacts or even modules. For even higher currents, CROWN EDGE connectors can be mounted onto a bus bar, and mate directly with a bus bar tab. Optimum interface to the mounting PC board is achieved through five termination tails.

Flexible Modular Design
To make easy work of power distribution design, CROWN EDGE connectors are available in modules of 2 and 3 contact segments with power or signal contacts or a combination of both in a single module. Modules can be placed end-to-end for assemblies up to 8’ (203.20 mm) long. Custom molded configurations are possible on high-volume projects. Consult Tyco Electronics or your local Tyco Electronics sales representative for details.

Versatile Power Arrangements
Opposing contacts are isolated, so power connections at different voltage levels can be on one side of the board, with ground or power return on the other side.

True Hot-Plug Support
CROWN EDGE power modules that support current interruption under load as defined by safety regulatory agencies are also available for mating to a metal blade or bus bar tab. These true hot-plug modules allow current interruption under load by incorporating a contact design that restricts the effects of arcing to areas that do not compromise the integrity of the connection.
CROWN EDGE Card Edge-style High Current Connectors (Continued)

Materials & Finishes

| Insulators | PPA, UL 94-V-0 flammability rated, color black |
| Non-hot-plug power contact | Copper alloy, selectively plated with gold (30 micro inches minimum) and tin on terminations, all over nickel |

Contacts

| Hot-plug power contact | Contact holder | CROWN BAND element |
| Hot-plug power contact | Phosphor bronze alloy, selectively plated with tin on terminations, over nickel |
| Phosphor bronze alloy, selectively plated with gold (30 micro inches minimum), over nickel |

Signal contacts | Phosphor bronze alloy, selectively plated with gold (30 micro inches minimum) and tin on terminations, all over nickel |

Electrical

| Current ratings | Power contact | 35A (see graph below) |
| Signal contact | 3A max. |
| Insulation resistance | 5,000MΩ minimum at 500 VDC for 2 minutes, power MIL-STD 1344, Method 3003 |
| Dielectric strength | 1,500VDC for 1 minute, per MIL-STD 1344, Method 3001 |

Mechanical

| Mating PCB thickness | .062" 9.16 mm ±.006" (0.15 mm) |
| Insertion Forces | 2 segment power module 5.0 lbf typical using .062" (1.6 mm) thick mating board with 5 oz. of copper |
| 3 segment power module 6.0 lbf typical using .062" (1.6 mm) thick mating board with 5 oz. of copper |
| Extration Forces | 2 segment power module 3.0 lbf typical using .062" (1.6 mm) thick mating board with 5 oz. of copper |
| 3 segment power module 5.0 lbf typical using .062" (1.6 mm) thick mating board with 5 oz. of copper |
| Tooling | Press fixture is recommended for compliant press-fit assemblies Consult Tyco Electronics customer service for details |

Current Ratings

The chart below demonstrates the performance of the CROWN EDGE power contact by showing the temperature rise at different current levels applied to two power contacts connected in series.

Current rating for any given application will depend, among other things, on the module combination, PCB copper trace volume, and internal equipment temperature/air flow. Mounting and mating to a bus bar will increase current ratings.

Safety Regulatory Compliance

CROWN EDGE connectors have been evaluated by Underwriters Laboratories and have been found to comply with the requirements of U.S. standard UL1997 and Canadian standard C22.2 No. 182.3-M1987.

Compliance with Current Interruption Requirements

Hot-plug CROWN EDGE modules are available for applications that require current interruption as defined by safety regulatory agencies. These power-only modules have been evaluated and recognized by Underwriters Laboratories for current interruption up to 50 cycles as per the UL1977 standard. See hot-plug requirements on page 180.

6651290-1 Press-fit tail
6651290-2 Long solder tail
6651290-3 Short solder tail

Note: All part numbers are RoHS compliant.
Design Notes

Mating PCB Requirements

Mating PCB edge fingers should be gold plated, have .050" (1.3 mm) side margins, and be of suitable copper weight for power applications. Mating board thickness is .062 [1.60].

Sequenced Mating

Sequenced mating can be achieved by designing one or more setback traces on the mating card edge, or by notching the edge of the card.

End-to-end Mounting

CROWN EDGE modules can be placed end-to-end for connector assemblies up to 8" (203.20 mm) long.

Mating PC Card Edge Samples

The drawings below show two PC card edge samples with signal and power lines designed to mate with 2 and 3-segment CROWN EDGE modules.

Hot-Plug Requirements

Hot-plug application of this product requires the use of the CROWN EDGE true hot-plug modules (see part numbers on pages 177-179) mated with a customer-supplied metal blade or bus bar. Dimensions of a sample mating blade for use with CROWN EDGE hot-plug modules is shown below.
CROWN EDGE Card Edge-style High Current Connectors (Continued)

Connector Mounting

Solder Tails
Solder termination is available in two lengths. See table below for board thicknesses and recommended tail lengths.

<table>
<thead>
<tr>
<th>Board Thickness</th>
<th>Dimension “A”</th>
</tr>
</thead>
<tbody>
<tr>
<td>.062” (1.6 mm)</td>
<td>.100” - .140” (2.55 - 3.57 mm)</td>
</tr>
<tr>
<td>.092”/125” (2.3/3.0 mm)</td>
<td>.160” - .200” (4.06 - 5.08 mm)</td>
</tr>
</tbody>
</table>

Press-fit Tails
CROWN EDGE connectors use truly compliant eye of the needle press-fit tails designed for boards 0.093” thick and above.

Tail Length vs. Board Thickness

Tooling for Compliant Press-fit Assemblies
Pressing fixtures are recommended for compliant press-fit assemblies. Contact Tyco Electronics for a detailed tool drawing.

Suggested Printed Circuit Hole for Power and 2.5 mm Signal
Finished Hole: Ø .040 ± .003 [Ø 1.02 ± .08]
Drilled Hole: Ø .0453 ± .005 [Ø 1.151 ± .013]
Copper Plate: .0010 [.025] min. (per surface)
Tin Plate: .0003 [.008] min. (per surface)

Suggested Printed Circuit Hole for 1.5 mm Signal
Finished Hole: Ø .022 ± .002 [Ø 0.56 ± 0.05]
Drilled Hole: Ø .026 ± .002 [Ø 0.65 ± 0.02]
Copper Plate: .0010 [.025] min. (per surface)
Tin Plate: .0003 [.008] min (per surface)

Spacing Between Modules in End-to-end Mounting
This spacing between plated thru-holes for end-to-end mounting varies depending on the chosen module combination. Spacing for the three possible combinations is shown below.

Power-to-power

Power-to-signal (1.5 mm)

Power-to-signal (2.5 mm)

Custom Solutions

Non-standard Modules
In case the standard CROWN EDGE modules do not meet your design requirements, Tyco Electronics has the capability to mold any combination of power and signal contact layouts in 2 and 3 segment modules.

Application-specific Custom Designs
Tyco Electronics has a long history of designing and building application specific custom connectors, and CROWN EDGE connectors are no exception. A one-piece CROWN EDGE insulator, instead of a combination of several modules, provides a more robust interconnection design, as well as cost savings in high volume projects. Consult Tyco Electronics Customer Service for details.
Product Facts

- Combines industry standard 0.100" pitch card edge format in a high power density design
- Industry-proven multi-beam power contact design
- High conductivity contact materials
- High temperature housing materials
- UL 94V-0
- Selective gold plating for high performance with low cost
  - 0.000030 [0.00076] gold in contact area. Tin/lead on posts with entire contact nickel underplated
- Power Contact Current Ratings:
  - 38 amps — Single Contact
  - 22 amps — on each of 4 adjacent pairs (8 power contacts)
- Signal Contact Ratings:
  - 6 amps — Single Contact
  - 4 amps — on each of 6 adjacent contacts

SEC-II power connectors offer an ideal combination of low-current and high-current connections in a single, durable design. The trends in electronic power supplies require high current density and lower cost. In addition, smaller sized connectors are needed to provide less airflow restriction for cooling the power supplies. The SEC-II power connectors are built on an expandable tooling platform which allows for a variety of combinations of power and signal contacts, all combined in a single molded housing. The vertical press-fit versions are ideal for high density stacking of cards into a backplane or for low air restriction of blade-style power supply designs. The straddle mount style offers a true co-planar interconnection with a total height of less than 4 mm from the top surface of the PCB. SEC-II power connectors are currently in use in high-end computer and data storage equipment. Extensive testing in exposure to high vibration and shock has proven these connectors equally suited for industrial applications as well, where low contact resistance and high current density is required.

Standard Edge II Card Edge Connectors

Product Facts
- Maximum number of dual positions:
  - .100 [2.54] Centerlines-70
  - .125 [3.18] Centerlines-50
  - .150 [3.81] Centerlines-31
- Selective gold plating of contacts for high performance at low cost
- .025 [0.64] square solid posts meet standard wrap-type specifications
- For flow solder applications
- Glass-filled polyester housing is 94V-0 rated
- Accepts double sided PC boards, .054-.070 [1.27-1.78] thick
- Recognized under the Component Program of Underwriters Laboratories Inc., File No. E28476
- Certified by Canadian Standards Association, File No. LR 7189

Performance Specifications
- Contact Rating* — 3 Amps continuous (UL and CSA)
- Contact Resistance — 10 milliohms max.
- Operating Temperature — –55°C to +85°C
- Voltage Rating (Sea Level)
  - .100 [2.54] centerline — 1000 VAC (test)
  - .125 [3.18] centerline — 1500 VAC (test)
  - .150 [3.81] centerline — 1500 VAC (test)
- Insulation Resistance — 5000 megohms min., after exposure to humidity
- Vibration Tolerance — 10 to 500 Hz
- Contact Engagement Force — 12 oz [3.3 N] average per pair with .062 [1.57] PC board
- Contact Separation Force — 2 oz [0.6 N] average per pair with .062 [1.57] PC board
- Humidity Tolerance — 90%-95% for 96 hours

Tyco Electronics Standard Edge II Connectors provide high reliability and economy in packages compatible with industry standards for double sided printed circuit boards.

Right-angle connectors are also available with contacts arranged on .100 [2.54] centers, .150 [3.81] row-to-row or .200 [5.08] row-to-row.

Card extenders with contacts on .100 [2.54] and .125 [3.18] centers also are available.

Precision formed phosphor bronze contacts are selectively gold plated. Phosphor bronze has excellent strength characteristics which help the connector absorb load deflection movement of a PC board while maintaining sufficient contact force for good electrical connection. Bifurcated cantilever beam contacts provide redundant contact.

*Consult Tyco Electronics engineering when paralleling contacts for power applications.

</table>

*C dimension is card slot length.
1 Metric equivalent for .100 x .150 and .100 x .200 are [2.54 x 3.81] and [2.54 x 5.08].
2 Metric equivalent for post length is .090 = [2.27].
3 Connector with Board Locks.

Note: Other connector sizes can be made available, consult Tyco Electronics.

No Mounting Ears
