

## Technical Data Sheet Wire Cleaner

The Hakko 599B cleans soldering iron tips without water. It is made from coils of brass which is softer than the tip plating yet harder than the oxidation that forms the tip. The 599B is the ideal alternative to a wet sponge.

To clean the tip, simply plunge (stab) the iron tip into the coils.

- “Shell” design keeps the solder from splattering
- Will not reduce the tip temperature
- A great alternative to the conventional damp sponge
- May be used as a portable tool holder and cleaner
