PRODUCT DATA SHEET

LINE MATCHING TRANSFORMER P3324

**Features**

- Lead-free (Pb-free)
- RoHS compliant
- 12.6mm (0.5") Seated Height
- Industry Standard Pinout
- IEC 60950 and UL 60950 Certified
- UL Recognized Component
- Environmentally tested to IEC 68
- CERT reliability tested
- Extended Frequency Response
- Flat TX and RX Responses
- Simple Matching
- Low Insertion Loss
- High Thermal Stability

**Applications**

- Voice
- V.22bis Modems
- Set Top Boxes
- Least Cost Routers
- Instrumentation

**DESCRIPTION**

P3324 is intended for low speed data and voice applications where good distortion at moderate power levels is required at a most competitive price.

P3324 uses patented design and construction methods to achieve excellent signal performance and safety isolation to international standards making it the component of choice for voice and low speed data applications throughout the world. P3324 is certified to IEC 60950 and UL60950. P3324 is a UL Recognized Component, and is supported by an IEC CB Test Certificate. The part is completely lead-free, compliant with RoHS Directive 2002/95/EC, and suitable for lead-free and conventional processing.

P3324 has exceptionally flat frequency response from 100Hz to 10kHz, a 3dB bandwidth of over 50kHz and requires only the very simplest of matching to achieve good return loss and transhybrid loss across the voiceband, with low levels of signal distortion at signal frequencies as low as 200Hz.

P3324 is a rugged lightweight design that exhibits stable characteristics over its full operating temperature range to maximize data throughput under varying environmental conditions without the need for modem retraining.

P3324 has been subjected to relevant environmental testing according to IEC 68 and Combined Environmental Reliability Testing (CERT) beyond normal operational levels and passed all tests, remaining fully functional.
## SPECIFICATIONS

### Electrical

At $T = 25^\circ C$ and as circuit Fig. 2 unless otherwise stated.

| Shunt loss, $R_p$                  | 200Hz 10mV                  | 6   | 8   | -    | kΩ    |

### Notes:

1. Third harmonic typically exceeds other harmonics by 10dB.
2. Components are 100% tested at 3.25kVDC.
3. Caution: do not pass DC through windings. Telephone line current must be diverted using semiconductor line hold circuit or choke.
4. At signal levels greater than 100mV, $L_p$ will increase and $R_p$ will decrease slightly but the effect is usually favourable to the return loss characteristic.
5. Return loss and transhybrid loss can be improved to 30dB in improved matching circuit. The values shown relate to the simplest configuration, Fig. 2.
MATCHING RECOMMENDATIONS

The following recommendations start with the simplest implementations and progress to enhanced performance utilizing additional components. Good performance is achieved even with the simplest configurations. The implementations assume a low impedance balanced TX drive and a relatively high impedance RX input, as is commonly available, though use with other TX/RX arrangements is straightforward. Note that there are no changes to components on the line side, or in the hybrid, whether 600Ω or complex reference impedance selected, thus assisting country configuration. For complex impedance, the matching circuits derived are suitable for reference impedances of the type 270 + 750Ω/150nF e.g. European CTR21 and 220 + 820Ω/120nF (or 115nF) e.g. Australia, South Africa, etc., and yield similar performance characteristics. For other impedances, please contact Profec Technologies.

Minimum Cost Implementations

**600Ω**

![Fig. 2](image)

*Insertion Loss: 2.2dB @ 2kHz
Frequency Response: ±0.1dB 200Hz – 10kHz
Return Loss: 18dB 200Hz – 4kHz
Transhybrid Loss: 22dB 200Hz – 4kHz*

**Improved matching and hybrid**

![Fig. 4](image)

*Insertion Loss (Line to RXA): 3.2dB @ 2kHz
Frequency Response: ±0.1dB 200Hz – 10kHz
Return Loss: 20dB 200Hz – 4kHz
Transhybrid Loss: 30dB 200Hz – 10kHz*

**Complex European CTR21/(Australia, etc.)**

![Fig. 3](image)

*Insertion Loss: 1.3dB @ 2kHz
Frequency Response: ±0.5dB 200Hz – 4kHz
Return Loss: 18dB 200Hz – 4kHz
Transhybrid Loss: 14dB 200Hz – 4kHz*

*Note: 100nF capacitor should have a temperature stable dielectric
+ Note: 2.2μF capacitor may be acceptable

![Fig. 5](image)

*Insertion Loss (Line to RXA): 2.5dB @ 2kHz
Frequency Response: ±0.5dB 200Hz – 4kHz
Return Loss: 20dB 200Hz – 4kHz
Transhybrid Loss: 18dB 200Hz – 4kHz*

*Note: 100nF capacitor should have a temperature stable dielectric
+ Note: 2.2μF capacitor may be acceptable
600Ω Instrumentation

Insertion Loss: 1.8dB @ 2kHz
Frequency Response: ±0.2dB 50Hz – 20kHz
Return Loss: 16dB 20Hz – 20kHz

CONSTRUCTION

Dimensions

* If no DC block required, one of these capacitors can be removed and the other set to 22μF; or if preferred, both capacitors can be eliminated.

Connections

Dimensions shown are in millimetres (inches).
Geometric centres of outline and pin grid coincide within a tolerance circle of 0.6mmØ.
Windings may be used interchangeably as primary or secondary.
Total weight typically 5.2g.
## ENVIRONMENTAL TESTING

### Reliability testing to IEC 68

Tested to clauses of IEC 68 and compliant with all functional and safety requirements following exposure as follows:

### Combined Environmental Reliability Testing (CERT)

Components step stressed at increasing levels of severity using combined stresses to detect potential weaknesses.

Results are shown for highest levels of stress tested. Compliant with all functional and safety tests following exposure as follows:

<table>
<thead>
<tr>
<th>Test description</th>
<th>Test details</th>
<th>Duration</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>

</tbody>
</table>
SAFETY

Constructed in accordance with IEC 60950-1, EN 60950-1, and UL 60950-1, supplementary insulation, 250Vrms maximum working voltage, flammability class V-0.

There are no special installation requirements (beyond attending to usual PCB track separations) since the integral cover provides supplementary insulation from its external faces to internal core and windings.

CERTIFICATION

Certified under the IEC CB scheme (Certificate DK-8570) to IEC 60950-1-2001, sub-clauses 1.5, 1.5.1, 1.5.2, 1.7.1, 2.9, 2.9.1, 2.9.2, 2.9.3, 2.10, 2.10.1, 2.10.2, 2.10.3, 2.10.3.1, 2.10.3.2, 2.10.4, 2.10.5, 2.10.5.1, 2.10.5.2, 2.10.5.4, 4.7, 4.7.1 (classV-1), 4.7.3, 4.7.3.1, 4.7.3.4, 5.2, 5.2.1, 5.2.2, 6.1.2.1 (Finland, Norway, Sweden national deviations) for a maximum working voltage of 250Vrms, nominal mains supply voltage not exceeding 300Vrms and a maximum operating temperature of 70°C in Pollution Degree 2 environments.

Recognized under the Component Recognition Program of Underwriters Laboratories Inc. to US and Canadian requirements CAN/CSA C22.2 No. 60950-1-03/UL60950-1, First Edition, based on IEC 60950-1, First Edition, maximum working voltage 180Vrms (creepage), 420V peak (clearance), Pollution Degree 2, supplementary insulation.

UL File number E203175.

Additionally, Profec Technologies certifies all transformers as providing voltage isolation of 2.12kVrms, 3kV DC minimum. All shipments are supported by a certificate of conformity to current applicable safety standards.

ABSOLUTE MAXIMUM RATINGS

(Ratings of components independent of circuit).

- Short term isolation voltage (1s) 2.12kVrms, 3.0 kVDC
- DC current 100μA
- Storage temperature -40°C to +85°C
- Lead temperature, 10s 260°C
