

FEATURES:

Silica-gel is a high-activity sorbing material, the outcome of chemical reaction of sodium silicate and sulfuric acid, ageing and sour bathing process. Silica-gel is an amorphous substance. Its molecular formula is $mSiO_2 \cdot nH_2O$.

It features a stable chemical property and never reacts with any substance except strong alkali and hydrofluoric acid. The chemical composition and physical structure of silica-gel makes it an exclusive ideal material for desiccant: high sorbing performance, high thermo stability, high mechanical robustness, non-toxic, tasteless and contamination free.
