

## Starter kit for ST620x, ST621x and ST622x

Data brief

### Features

- Immediate evaluation of ST620x, ST621x and ST622x devices, with demonstration examples
- In-socket/onboard programming (DIP sockets)
- Assembler-linker for ST6 and debugger/simulator software
- The starter kit includes:
  - Evaluation board
  - ST622x microcontroller samples
  - Power supply
  - Parallel cable for host PC interface
  - Software tools on CD-ROM

### Description

The ST622XC-KIT provides everything users need to start evaluating the microcontroller features and developing applications quickly and easily.

Each starter kit comes with a pre-programmed ST62E25 microcontroller. It demonstrates the microcontroller features using the on-board hardware resources such as push buttons, LEDs, potentiometer, buzzer and RS-232.

This starter kit is not an emulator. Program execution is much slower than on the real device as instructions are performed on the PC and I/Os are performed on the ST622XC-KIT.

**Table 1. Device summary**

| Order code  | Reference                                 |
|-------------|-------------------------------------------|
