MAINTENANCE

• Replace RS199 Cleaning Sponge

1. Fill water only up to the top of the **RS243** Leveling Pad.
2. Depress **RS199** to moisten it completely.

CAUTION:
Over-filling can cause thermal shock to the tip or heating element during tip cleaning.

• Replace SC581 Solder Collector

1. Hold the Housing firm and turn Cap counter-clockwise and pull it away from the Housing.
2. Remove used **SC581** and replace with a new one.

TEMPERATURE CALIBRATION

AIR MOVEMENT WILL AFFECT THE TEMPERATURE READING.

WORK IN AN AREA WHERE THIS IS MINIMUM.

1. Use the **DS299S** to remove the temperature control knob. Turn Temp. Control **(A)** so arrow points to cord.
2. Use the **SRW01** to pull out heater assembly, PCB & power cord from handle. Leave enough power cord slack to install **SRF30**.

3. Place heater assembly, PCB & power cord inside **SRF30**. Install tip that is clean and well tinned.
4. With the use of the **MS412 Temperature Calibration System**. Follow set-up shown below.
5. Plug in tool and by using the Pot Adjustment Tool supplied, turn Temp. Control **(A)** to "solder-melt" temperature.
6. Apply a small amount of solder on the Tip, just enough to form a solder bead on top of the Tip. Place the center of the thermocouple wire of the on top of the solder bead.
7. Again, apply a small amount of solder on the center of the cross wire, just enough to embed the center.
8. Turn Temp. Control **(A)** fully clockwise. Adjust Calibration Pot **(B)** until reading stabilizes at 800°F.
9. Assemble unit in original handle.
10. Before installing the Temp. Control Knob, peel-off pointer label from the Knob.
11. Using same MS412 set-up, install and adjust Temp. Control Knob so Meter will read desired temperature.
12. Attach new pointer label in accordance with the reading of the Meter.
