MICROCHIP

DM183036 - Microchip Bluetooth(R) Evaluation Kit

The Microchip Bluetooth(R) Evaluation Kit includes an expansion board used for evaluating and adding Bluetooth(R) wireless technology on 16/32-bit PIC MCUs and dsPIC DSCs. The kit consists of the Bluetooth(R) PICtail™ Plus Daughter Board and the PIC24FJ256GB110 and PIC32MX795 USB Plug-in Modules, both of which come pre-programmed with the dotstack™ Bluetooth(R) demonstration Stack and SPP (Serial Protocol Profile). This kit requires an Explorer 16 Development Board to complete the board configuration.
