# Pin Description

**Power Supply**

| Pin Number | Symbol | Type | Function |
|---|---|---|---|
| 8 | VDD | | **Power Supply for Logic Circuit**<br>This is a voltage supply pin. It must be connected to external source. |
| 7 | VSS | P | **Ground of OEL System**<br>This is a ground pin. It also acts as a reference for the logic pins. It must be connected to external ground. |
| 14 | VCC | | **Power Supply for OEL Panel**<br>This is the most positive voltage supply pin of the chip. It must be supplied externally. |

**Driver**

| Pin Number | Symbol | Type | Function |
|---|---|---|---|
| 12 | IREF | I | **Current reference for Brightness Adjustment**<br>This pin is segment current reference pin. A resistor should be connected between this pin and VSS. Set the current at 10μA maximum. |
| 13 | VCOMH | O | **Voltage Output High Level for COM Signal**<br>This pin is the input pin for the voltage output high level for COM signals. A tantalum capacitor should be connected between this pin and VSS. |

**DC/DC Converter**

| Pin Number | Symbol | Type | Function |
|---|---|---|---|
| 5 | VDDB | P | **Power Supply for DC/DC Converter Circuit**<br>This is the power supply pin for the internal buffer of the DC/DC voltage converter. It must be connected to external source when the converter is used. It should be connected to V$_{DD}$ when the converter is not used. |
| 3/4<br>1/2 | C1P/C1N<br>C2P/C2N | I | **Positive Terminal of the Flying Inverting　Capacitor**<br>**Negative Terminal of the Flying　Boost　Capacitor**<br>The charge-pump capacitors are required between the terminals. They must be floated when the converter is not used. |

**Interface**

| Pin Number | Symbol | Type | Function |
|---|---|---|---|
| 9 | RES# | I | **Power Reset for Controller and Driver**<br>This pin is reset signal input. When the pin is low, initialization of the chip is executed. Keep this pin pull high during normal operation. |
| 10 | SCL | | **I2C Bus Clock Signal**<br>The transmission if information in the I2C bus is following a clock signal. Each transmission of data bit is taken place during a single clock period of this pin. |
| 11 | SDA | I/O | **I2C Bus Data Signal**<br>This pin acts as a communication channel between the transmitter and the receiver. |

**Reserve**

| Pin Number | Symbol | Type | Function |
|---|---|---|---|
| 6 | N.C. | - | **Reserved Pin**<br>The N.C. pin between function pins is reserved for compatible and flexible design. It must be floated. |
