

## **GYRO SENSORS EVALUATION PLATFORM (EVP)**

## **Features**

- Evaluation platform PCB with signal access
- USB cable for power supply and communication
- PC software with data presentation and log-tofile capability
- User manual
- Source files, schematics and layouts available

## Description

The gyro sensors evaluation platform provides rapid measurement access for gyro sensors from Sensonor Technologies. Power supply and communication is provided by the USB. Results are presented graphically and numerically in PC software, and written to file (optional).

A number of signals are made available on header pins for purpose of monitoring and test, e.g. for confirming timing of SPI communication between micro controller and sensor, which can be interest for the application.

Add-on satellite PCBs are available for all sensors for the purpose of test. Sources codes, schematics and layouts are available.
