

FCC-250 Fiber Cleaner - Instructions for Use

The Jonard Tools FCC-250 quick click ferrule end face cleaner is designed to provide exceptional cleaning performance by cleaning FC, SC and ST connectors beyond the critical fiber core area and cleaning deep into the contact area of a bulkhead adapter or connectors on fiber optic cables.

The FCC-250 features a patented 360 degree Rotational Tip for extra wide cleaning, easy one push operation and extendable nozzle providing an additional 1.5 inches for a nozzle length of 4 inches to aid in accessing deep ports or crowded access panels. Additionally the FCC-250 uses a non-woven micro fiber that is lint free. The FCC-250 provides 800+ cleanings and the outer body is made from static dissipative material for safe ESD work.

PATENTED CLEANING TECHNOLOGY

1. Slide-Guide™ non-slip micro tape feeder guarantees high reliability

2. Dual Rotational tip provides quick, repeatable and superior ferrule end face cleaning

EASY TO USE

For bulkhead applications remove the end cap, insert end into bulkhead and push forward. When you hear the audible "click" sound cleaning is complete. For tight spaces you can extend the nozzle forward with the slide button on the tool body.

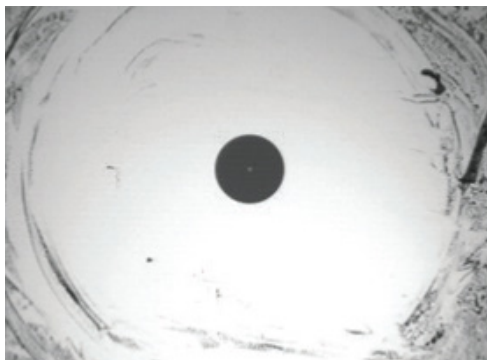

To clean end faces of connectors, open the top of the cap exposing the connector adapter. Insert connector into adapter and pull connector towards the tool until you hear an audible click. The cleaning process is now complete.
