1 Introduction

The FT4232H-56Q Mini Module is a USB-serial/FIFO development module in the FTDI product range which utilizes the FT4232H-56Q USB Hi-Speed four-port bridge chip which handles all the USB signalling and protocols. It is ideal for development purposes to quickly prove the functionality of adding USB to a target design. The FT4232H datasheet, DS_FT4232H, is available at http://www.ftdichip.com.

![FT4232H-56Q Mini Module](image)

**Figure 1.1 FT4232H-56Q Mini Module**

The FT4232H-56Q on the Mini Module is FTDI’s 5th generation of USB devices. The FT4232H is a USB 2.0 High Speed (480Mb/s) to UART/MPSSE IC. The device features four interfaces that can be independently configured for asynchronous or synchronous serial interfaces. Two of these have an option to independently configure an MPSSE engine. This allows the FT4232H to operate as two UART/Bit-Bang ports plus two MPSSE engines used to emulate JTAG, SPI, I²C, Bit-bang or other synchronous serial modes. All components used, including the FT4232H-56Q are Pb-free (RoHS compliant).

The FT4232H-56Q Mini Module connects the signals of the FT4232H-56Q IC to two 26-pin dual-row headers which allow easy connection to PCB header sockets and ribbon cables.

The FT4232H-56Q Mini Module requires USB device drivers, available free from [http://www.ftdichip.com](http://www.ftdichip.com), which are used to make the FT4232H-56Q on the Mini Module appear as a four virtual COM ports (VCP). This then allows the user to communicate with the USB interface via a standard PC serial emulation port (TTY). Another FTDI USB driver, the D2XX driver, can also be used with application software to directly access the FT4232H on the Mini Module through a DLL. This is illustrated in

**Figure 1.2 Using the FT4232H-56Q Mini Module**
Device Drivers for the FT4232H-56Q Mini Module are available free from http://www.ftdichip.com.
1.1 USB Compliant

The FT4232H-56Q Mini Modules are fully compliant with the USB 2.0 specification.

2 Typical Applications

- Rapid USB integration into existing electronic systems.
- Prototyping platform for USB interface on new systems.
- USB to multi-port JTAG, SPI and I²C interfaces (Two Multi-Protocol Synchronous Serial Engines – MPSSE – available with the FT4232H)
- USB to multi-port asynchronous serial interfaces (up to 4 ports available).
- Four independent ports available, two of which may be configured for MPSSE mode.

2.1 Driver Support

**Royalty free VIRTUAL COM PORT (VCP) DRIVERS for...**
- Windows 10 32,64-bit
- Windows 8/8.1 32,64-bit
- Windows 7 32,64-bit
- Windows Vista and Vista 64-bit
- Windows XP and XP 64-bit
- Windows XP Embedded
- Windows CE 4.2, 5.0 and 6.0
- Mac OS 8/9, OS-X
- Linux 2.4 and greater

**Royalty free D2XX Direct Drivers (USB Drivers + DLL S/W Interface)**
- Windows 10 32,64-bit
- Windows 8/8.1 32,64-bit
- Windows 7 32,64-bit
- Windows Vista and Vista 64-bit
- Windows XP and XP 64-bit
- Windows XP Embedded
- Windows CE 4.2, 5.0 and 6.0
- Linux 2.4 and greater
- Android(J2xx)

The drivers listed above are all available to download for free from [www.ftdichip.com](http://www.ftdichip.com).

2.2 Features

The FT4232H-56Q Mini Module has the following features:

- USB 2.0 Hi-Speed compatible
- Reduced development time
- Rapid integration into existing systems
- USB powered – no external power supply needed
- Based on the USB Hi-Speed FT4232H-56Q device
- Entire USB protocol handled by USB module
- Small USB Micro B connector common on many commercial devices
- Asynchronous Serial data transfer rates from 300 baud to 12 Mbaud at TTL levels
- Synchronous Serial (MPSSE) data rates of up to 30Mbps on JTAG, SPI and I²C
- Support for USB suspend and resume
- UHCI / OHCI / EHCI host controller compatible
- -40°C to +85°C operating temperature range
- The FT4232H-56Q is the QFN-56 pin package.
3 Electrical Details

The electrical details and connections to the FT4232H-56Q Mini Module are shown in Figure 3.1 and tables 3.1 and 3.2.

In most cases, the FT4232H-56Q pin is connected directly to the associated pin on CN2 or CN3.

The FT4232H-56Q Mini Module allows configuration with both USB Bus-powered designs and USB Self-powered designs:
USB Bus-powered:

1) JP1 is connected VBUS to VCC (CN3, pin 1 to CN3, pin 3). This connection takes the power from the USB bus (VBUS) and connects it to the voltage regulator input on the FT4232H-56Q Mini Module. The voltage regulator, in turn, provides V3V3, VPLL and VUSB power inputs to the FT4232H-56Q chip.

2) JP2 is connected V3V3 to VIO (CN2, pins 1, 3 & 5 to CN2, pins 11 and CN3, pins 12 & 22). This connection provides the correct 3.3VDC operating voltage for VCCIO on the FT4232H-56Q chip.

USB Self-Powered:

1) Remove the JP1 and JP2 jumper.

2) Leave VBUS (CN3, pin 1) unconnected.

3) Connect an external 5.0VDC power supply to VCC (5.0VDC to CN3, pin 3). This connection takes power from an external power supply and connects it to the voltage regulator input on the FT4232H-56Q Mini Module. See the FT4232H data sheet for allowable VCC input voltage ranges.

4) Connect V3V3 to VIO (CN2, pins 1, 3 & 5 to CN2, pins 11 and CN3, pins 12 & 22). This connection provides the correct 3.3VDC operating voltage for VCCIO on the FT4232H-56Q chip.

5) Use FT_Prog to change the USB power descriptor to “Self-Powered”. This setting indicates to the host system that the USB Host port does not need to supply power to the device. FT_Prog is a utility provided by FTDI to program various features of the FT-series USB client ICs. In order to access settings for the FT4232H-56Q, FT_Prog is required. FT_PROG is available via the Utilities section of the FTDI web site.
4 Mechanical details

The mechanical details of the FT4232H-56Q Mini Module are shown in Figure 4.1:

![FT4232H-56Q Mini Module Dimensions](image)

**Figure 4.1 FT4232H-56Q Mini Module Dimensions**

All dimensions are in millimetres.

The headers CN2 and CN3 are mounted to the bottom of the PCB. The overall height below the PCB is 8.5mm, with a body which exposes 6.0mm of the pins. The pins are 0.025 inch square.

The Micro-B USB connector has a height of 2.8mm.

Appendix C – FT4232H EEPROM Configuration

The FT4232H Mini Module utilizes an EEPROM which contains the USB configuration descriptors for the FT4232H. When the Mini Module is plugged into a PC or a USB reset is performed, the PC will read these descriptors. The default values stored into the EEPROM are defined in Table 0.1.

**Table 0.1 Default Internal EEPROM Configuration**

The EEPROM on the FT4232H-56Q Mini Module can be re-programmed over USB using the utility program FT_PROG. FT_PROG can be downloaded from here [www.ftdichip.com/Support/Utilities.htm](http://www.ftdichip.com/Support/Utilities.htm). Users who do not have their own USB Vendor ID but who would like to use a unique Product ID in their design can apply to FTDI for a free block of unique PIDs. Contact FTDI support for this service.
