

The Groov-e Fusion headphones are unique in that they can playback both wirelessly and with a wire. Bluetooth connectivity allows the headphones to playback wirelessly for up to 10 hours – making them ideal for users on the go. A built-in microphone also allows users to make phone calls hands-free whilst in the car, at the office or on the move. A micro-USB charger is included for re-charging the headphones and within 2 hours, users are back on the move with up to 10 additional hours or wireless playback.

Alternatively, for those who prefer to use a cable and save battery, the Fusion headphones feature a 3.5mm headphone jack for corded audio playback. This option is perfect for anyone on long plane journeys or who are simply 'staying put'.

The Fusion headphones are built for simplicity yet pack exceptional treble and bass, thanks to 40mm drivers. Over-ear noise isolating cushions also provide enhanced sound as well as long-listening comfort. Swivel earcups offer users the ease of adjusting the headphones to suit their needs and an adjustable headband with a folding mechanism allows for added comfort.

The Groov-e Fusion headphones are perfect for users on the go or for those resting in the comfort of their homes. These versatile headphones are available 3 stunning colours options – black, gold and silver.
