Application
H05V-K (X05V-K) are wiring cables with thermoplastic PVC-insulation for protected, stationary installation inside devices as well as inside or on lamps. Suitable for installation inside of closed conduits and cable ducting systems and on or under plaster, but only as part of signal or control circuits.

Under individual part numbers, different core insulation colours and package types are offered for diverse application types. More and more automatic harnessing machines are made use of by the manufacturing sector for the harnessing of such hook-up wires. Especially therefor, we offer parts with embossed cable marking instead of printing and which are delivered inside big one-way cardboard boxes with enhanced cable amount per box. Further standard package types are classic coils with standard order length as well as spools with winded, fix standard length of this wire.
