LF PCN A0109: Notification for expansion of MICRO2 0327 series

October 5, 2016

Dear Valued Customer,

As part of our process to maintain capability and capacity on standard product lines sold to multiple customers, Littelfuse is taking the following actions for the 0327 MICRO2 blade fuse series:

Littelfuse will add one assembly machine to expand capacity. This line is a copy of the machines that are used to build our LPMINI products (other blade fuse family). There are no changes to the rest of the current assembly equipment. This will be additional capacity and this action is being taken to protect supply. The new equipment will have no impact on the Form, Fit, or Function of the product.

The target date for introduction is November 14, 2016.

Impacted Materials:

Product Series	Style / Description
0327010.YX2S	Fuse - Micro2 Blade 32V Ag 10A 4000 pc
0327010.YX2T	Fuse - Micro2 Blade 32V Sn 10A 4000 pc

Please contact your local Littelfuse representative if you have any additional questions. We will be pleased to answer any questions you may have. Thank you for your continued support.

Best Regards,

Aram Tamez
