

Novopro STP Scrim Range

The Novopro STP (Scrim Truss Podium) socks are placed around your truss, podiums or lecterns to give you that professional scrim appearance.

Available in 1m and 2m lengths, small or larger truss sizes, with or without velcro and in either black or white scrim finishes, the STP range will solve your scrim requirements. Manufactured from a double stitched elasticated material that allows the scrim sock to stretch around the metalwork, they create a material finish that can either be used to blackout or be illuminated for some creative effects.

Standard scrim versions are installed by simply placing over your truss. The "V" (for velcro) versions have male and female velcro along the long edge so that they can be fitted around a podium or lectern where it is not easy to slide scrim over the unit or fitted to truss where you wish to add scrim after a truss structure has already been assembled.

- STP100 series will fit truss that has an outer perimeter of 520mm to 850mm, including Trilite 100 series tri & quad truss and 200 series tri truss along with small to medium sized trussing from other manufacturers.

- STP200 series will fit truss that has an outer perimeter of 850mm to 1300mm, including Trilite 200 series quad & 18+ truss along with medium to large sized trussing from other manufacturers.

- The Novopro STP range are treated with a fire retardant finish (which must be re-applied after hand or machine washing) and come with a convenient drawstring carry bag.
