Next Generation USB-C(tm) Charging & Data Syncing

Looking to connect your next generation digital device or computer to the exciting, new USB-C(tm) interface?

The new LMS Data **C-USB-T-C** uses the recently launched, reversible USB-C(tm) connector, that works no matter what way you plug it in, all in a more compact and of course future-proofed form factor. But there's more.

With enhanced capabilities to support up to 3A of power, the cable is ideal for newer devices such as the Samsung(tm) Galaxy S8 for example. Of course its compatible with your existing USB2.0 port so you can happily sync your data at the same time as charging the device, at the USB2.0 standard of around 480Mbps.

Supplied in a generous cable length of around 1-metre, the C-USB-T-C is an ideal, cost-effective alternative to more expensive vendor solutions on the market today.

specifications:

Next generation USB-C(tm) reversible connector

Provides charge power up to around 3-Amps

Charge and Sync your device at the same time

Ideal for Samsung(tm) GalaxyS8(tm) and more

Generous 1-metre (approx.) cable length

Robust, low-profile design for longer life
