Primary-switched QUINT DC/DC converter for DIN rail mounting with SFB (selective fuse breaking) technology, input: 48 V DC, output: 48 V DC/5 A

Product Description

QUINT DC/DC converter with maximum functionality.

DC/DC converters alter the voltage level, regenerate the voltage at the end of long cables or enable the creation of independent supply systems by means of electrical isolation. QUINT DC/DC converters magnetically and therefore quickly trip circuit breakers with six times the nominal current, for selective and therefore cost-effective system protection. In addition, the high system availability is ensured by preventive function monitoring which reports critical operating states before errors can occur.

Why buy this product

- Reliable starting of difficult loads, thanks to the static POWER BOOST power reserve with up to 125% nominal current permanently
- ☑ Preventive function monitoring indicates critical operating states before errors occur
- Support conversion to various voltage levels
- ☑ Electrical isolation: for setting up independent supply systems
