

CERAMIC CAPACITOR PROTO-TYPE DESIGN KITS

Johanson Dielectrics offers a variety of multi-layer chip capacitor kits for proto-type design work. Each kit contains a selection of popular values and tolerances in standard case sizes. The chips are individually packaged in marked plastic vials for easy access and assembled in a vinyl binder for convenient shelf storage. All chips are nickel-barrier terminated for SMT reflow solder process compatibility.

The selections listed below represents typical kit contents. Johanson reserves the right to make limited value/tolerance substitutions when necessary. Please advise any critical values at time of order.
