PNOZ m EF 8DI4DO

▸ Configurable control systems PNOZmulti 2

1   Introduction

1.1   Validity of documentation

This documentation is valid for the product PNOZ m EF 8DI4DO. It is valid until new documentation is published.

This operating manual explains the function and operation, describes the installation and provides guidelines on how to connect the product.

1.2   Using the documentation

This document is intended for instruction. Only install and commission the product if you have read and understood this document. The document should be retained for future reference.

1.3   Definition of symbols

Information that is particularly important is identified as follows:

DANGER!

This warning must be heeded! It warns of a hazardous situation that poses an immediate threat of serious injury and death and indicates preventive measures that can be taken.

WARNING!

This warning must be heeded! It warns of a hazardous situation that could lead to serious injury and death and indicates preventive measures that can be taken.

CAUTION!

This refers to a hazard that can lead to a less serious or minor injury plus material damage, and also provides information on preventive measures that can be taken.

NOTICE

This describes a situation in which the product or devices could be damaged and also provides information on preventive measures that can be taken. It also highlights areas within the text that are of particular importance.

INFORMATION

This gives advice on applications and provides information on special features.

2   Overview

2.1   Scope of supply

▸ Expansion module PNOZ m EF 8DI4DO

▸ Jumper

2.2   Unit features

Using the product PNOZ m EF 8DI4DO:

Expansion module for connection to a base unit from the configurable control system
PNOZmulti 2 .

The product has the following features:

▸ Can be configured in the PNOZmulti Configurator

▸ Semiconductor outputs:

   4 safety outputs
   Depending on the application, up to PL e of EN ISO 13849-1 and up to SIL CL 3 of EN
   IEC 62061

▸ 8 inputs for connecting, for example:

   – E-STOP pushbutton

   – Two-hand button

   – Safety gate limit switch

   – Start button

   – Light beam devices

   – Scanner

   – Enabling switch

   – PSEN

   – Operating mode selector switch

▸ LED for:

   – Error messages

   – Diagnostics

   – Supply voltage

   – Output circuits

   – Input circuits

▸ Test pulse outputs used to monitor shorts across the inputs

▸ Monitoring of shorts between the safety outputs

▸ Plug-in connection terminals:
   Either spring-loaded terminal or screw terminal available as an accessory (see order
   reference)

▸ Please refer to the document "PNOZmulti System Expansion" for the PNOZmulti base
   units that can be connected.

2.3   Front view
Key:

▶   0 V, 24 V: Supply connections

▶   Inputs I0 – I7

▶   Outputs O0 – O3

▶   LEDs:

   –   POWER

   –   Run

   –   Diag

   –   Fault

   –   I Fault

   –   O Fault

3 Safety

3.1 Intended use

The expansion module may only be connected to a base unit from the configurable system PNOZmulti 2 (please refer to the document "PNOZmulti System Expansion" for details of the base units that can be connected).

The configurable system PNOZmulti 2 is used for the safety-related interruption of safety circuits and is designed for use in:

- Emergency stop equipment
- Safety circuits in accordance with VDE 0113 Part 1 and EN 60204-1

The following is deemed improper use in particular:

- Any component, technical or electrical modification to the product
- Use of the product outside the areas described in this manual
- Use of the product outside the technical details (see Technical details [17]).

> **NOTICE**
> EMC-compliant electrical installation
>
> The product is designed for use in an industrial environment. The product may cause interference if installed in other environments. If installed in other environments, measures should be taken to comply with the applicable standards and directives for the respective installation site with regard to interference.

3.2 System requirements

Please refer to the "Product Modifications PNOZmulti" document in the "Version overview" section for details of which versions of the base unit and PNOZmulti Configurator can be used for this product.

3.3 Safety regulations

3.3.1 Use of qualified personnel

The products may only be assembled, installed, programmed, commissioned, operated, maintained and decommissioned by competent persons.

A competent person is someone who, because of their training, experience and current professional activity, has the specialist knowledge required to test, assess and operate the work equipment, devices, systems, plant and machinery in accordance with the general standards and guidelines for safety technology.

It is the company's responsibility only to employ personnel who:

- Are familiar with the basic regulations concerning health and safety / accident prevention
- Have read and understood the information provided in this description under "Safety"

▶ And have a good knowledge of the generic and specialist standards applicable to the specific application.

3.3.2 Warranty and liability

All claims to warranty and liability will be rendered invalid if

▶ The product was used contrary to the purpose for which it is intended

▶ Damage can be attributed to not having followed the guidelines in the manual

▶ Operating personnel are not suitably qualified

▶ Any type of modification has been made (e.g. exchanging components on the PCB boards, soldering work etc.).

3.3.3 Disposal

▶ When decommissioning, please comply with local regulations regarding the disposal of electronic devices (e.g. Electrical and Electronic Equipment Act).

3.3.4 For your safety

The unit meets all the necessary conditions for safe operation. However, you should always ensure that the following safety requirements are met:

▶ This operating manual only describes the basic functions of the unit. The expanded functions are described in the PNOZmulti Configurator's online help. Only use these functions once you have read and understood the documentations.

▶ Do not open the housing or make any unauthorised modifications.

▶ Please make sure you shut down the supply voltage when performing maintenance work (e.g. exchanging contactors).

4 Function description

4.1 Integrated protection mechanisms

The relay conforms to the following safety criteria:

▸ The circuit is redundant with built-in self-monitoring.

▸ The safety function remains effective in the case of a component failure.

▸ The safety outputs are tested periodically using a disconnection test.

4.2 Functions

The expansion module provides additional inputs and additional semiconductor outputs.

The function of the inputs and outputs on the control system depends on the safety circuit created using the PNOZmulti Configurator. A chip card is used to download the safety circuit to the base unit. The base unit has 2 microcontrollers that monitor each other. They evaluate the input circuits on the base unit and expansion modules and switch the outputs on the base unit and expansion modules accordingly.

The online help on the PNOZmulti Configurator contains descriptions of the operating modes and all the functions of the PNOZmulti control system, plus connection examples.

4.3 System reaction time

Calculation of the maximum reaction time between an input switching off and a linked output in the system switching off is described in the document "PNOZmulti System Expansion".

4.4 Block diagram
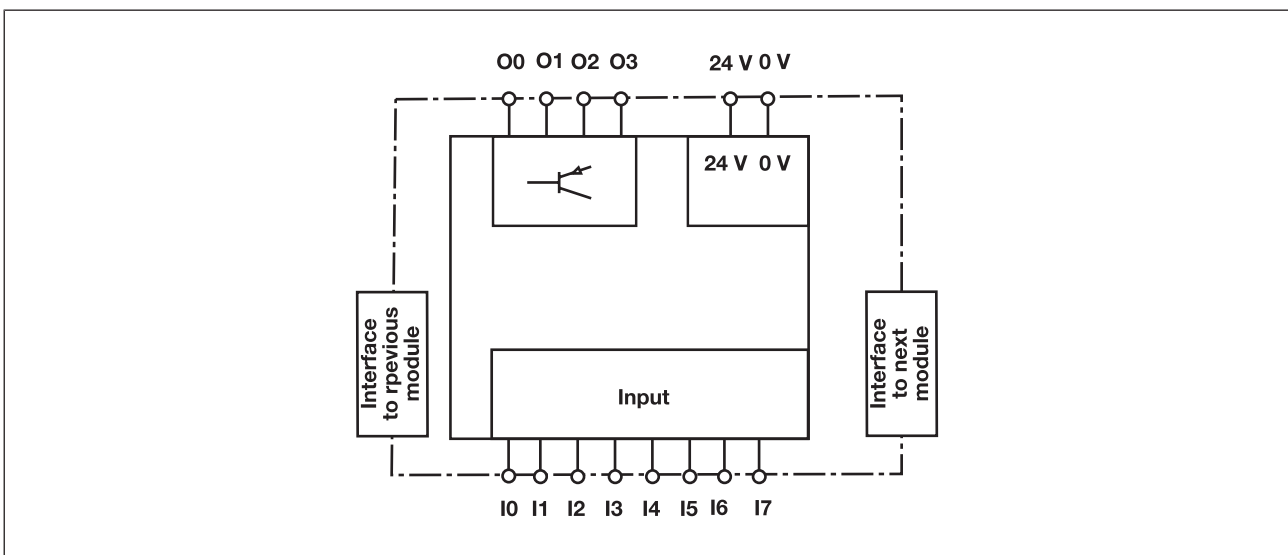

5 Installation

5.1 General installation guidelines

▶ The unit should be installed in a control cabinet with a protection type of at least IP54.

▶ Fit the safety system to a horizontal mounting rail. The venting slots must face upward and downward. Other mounting positions could damage the safety system.

▶ Use the locking elements on the rear of the unit to attach it to a mounting rail.

▶ In environments exposed to heavy vibration, the unit should be secured using a fixing element (e.g. retaining bracket or end angle).

▶ Open the locking slide before lifting the unit from the mounting rail.

▶ To comply with EMC requirements, the mounting rail must have a low impedance connection to the control cabinet housing.

▶ The ambient temperature of the PNOZmulti units in the control cabinet must not exceed the figure stated in the technical details, otherwise air conditioning will be required.
> **NOTICE**
>
> Damage due to electrostatic discharge!
>
> Electrostatic discharge can damage components. Ensure against discharge before touching the product, e.g. by touching an earthed, conductive surface or by wearing an earthed armband.

5.2 Dimensions in mm

5.3 Connecting the base unit and expansion modules

Connect the base unit and the expansion modules as described in the operating manuals for the base modules.

▶ The terminator must be fitted to the last expansion module

▶ Install the expansion module in the position configured in the PNOZmulti Configurator.

The position of the expansion modules is defined in the PNOZmulti Configurator. The expansion modules are connected to the left or right of the base unit, depending on the type.

Please refer to the document "PNOZmulti System Expansion" for details of the number of modules that can be connected to the base unit and the module types.

6 Commissioning

6.1 General wiring guidelines

The wiring is defined in the circuit diagram of the PNOZmulti Configurator.

Please note:

▸ Information given in the Technical details [📖 17] must be followed.

▸ Use copper wire that can withstand 75° C.

6.2 Connection

Supply voltage	DC

Supply voltage

Input circuit	Single-channel	Dual-channel
Example: E-Stop without detection of shorts across contacts		
Example: E-Stop with detection of shorts across contacts		

Connection examples for the input circuit

Redundant output		
Single output		
Single output with advanced fault detection*		

Connection examples for semiconductor outputs

*Two loads may be connected to each safety output with advanced fault detection, even on applications in accordance with EN IEC 62061, SIL CL 3. Prerequisite: Feedback loop is connected, shorts across contacts and external power sources are excluded (e.g. through separate multicore cables). Please note that, in the event of an error in the feedback loop, the safety system switches to a safe condition and shuts down **all** the outputs.

Feedback loop	Redundant output	
Contacts from external contactors		

Connection examples for feedback loop

6.3   Download modified project to the PNOZmulti system

As soon as an additional expansion module has been connected to the system, the project must be amended using the PNOZmulti Configurator. Proceed as described in the operating instructions for the base unit.

> **NOTICE**
>
> For the commissioning and after every program change, you must check whether the safety devices are functioning correctly.
7 Operation
When the supply voltage is switched on, the PNOZmulti safety system copies the configuration from the chip card.

The LEDs "POWER", "DIAG", "FAULT", "IFAULT" and "OFAULT" will light up on the base unit.
