

# KBD-BT-S

Bluetooth(™)  
wireless keyboard  
for your digital  
devices

iPad(™) &  
iPhone(™)

Macbook(™)  
& iMac(™)

Windows(™) &  
Notebooks

Android(™)  
Smartphone & Tablet

Enjoy high-speed, wire-free typing on your devices

Tablets and smartphones are great devices when we are on the move, but don't you wish for a better, physical keyboard without relying on the limited 'touch-screen' functionality?

The new **KBD-BT-S** is a low-cost but quality tactile keyboard using the latest Bluetooth(™) wireless technology to easily connect to your tablet, smartphone or many other devices using a Bluetooth(™) connection. Not restricted by messy wires, the **KBD-BT-S** allows connection up to 10-metres from your device, ideal for sharing with other users or linking to your media centre in the living room.

Allowing fast and accurate typing, up to x50 quicker than a touch-screen, the **KBD-BT-S** features extra application keys for Apple(™) devices\*. Even though we use full-size keys the overall design has been reduced in size so its ideal for your notebook bag or brief-case-just take it anywhere!
