| Description and Purpose: | | |
| <p>This document summarizes the recent changes to the datasheet of the PYTHON 300/500/1300 and PYTHON 2000/5000 of which the removal of the so-called 'Multiple Slope operation is one of the more important changes. Although the silicon and the functionality of the silicon hasn't been modified or changed as such, this HDR mode will no longer be mentioned in the datasheets from now on as due to limitations in the production testing, the correct functionality of the multiple slope mode cannot be guaranteed. Customers who are already using this mode, are free to continue doing so yet without any warranties from ON Semiconductor.</p> <p>The list below summarises the changes made to this datasheet when compared to the prior version of this document (Revision 4, dated November 2017). No change has been made to the sensor design, assembly, or final test procedures of these products as part of this datasheet revision. The datasheet has been revised and updated where needed to improve the accuracy of the specifications and/or settings listed so as to provide optimal performance.</p> <p>Datasheets of the affected PYTHON devices can be downloaded from the following websites:</p> <p>PYTHON 300/500/1300 - http://www.onsemi.com/pub/Collateral/NOIP1SN1300A-D.PDF</p> <p>PYTHON 2000/5000 - http://www.onsemi.com/pub/Collateral/NOIP1SN5000A-D.PDF</p> <p>SUMMARY OF CHANGES IN THE DATASHEETS OF PYTHON 2000/5000</p> <p>Page 1: Remove "High Dynamic Range (HDR) Modes Possible"</p> <p>Page 15-19: Move register uploads to the Image Sensor Portal</p> <p>Page 29: Change picture to resemble subsampled readout more accurately</p> <p>Page 30: Remove Bias Register Uploads to Image Sensor Portal</p> <p>Page 31-32: Remove Multiple Slope Operation</p> <p>Page 36,37: Typo: 2st -> 2nd</p> <p>Page 42: Correct Window ID error. This is only 3 bits wide</p> <p>Page 49: Corrected P1 subsampling scheme with correct sequence</p> <p>Page 69-74: Replace "No connection" with "For test purposes only. Do not connect"</p> <p>Overall: Remove all binning references since this is not supported with NZROT</p> <p>SUMMARY OF CHANGES IN THE DATASHEETS OF PYTHON 300/500/1300</p> <p>Page 1: Remove "High Dynamic Range (HDR) Modes Possible"</p> <p>Page 17-24: Move register uploads to the Image Sensor Portal</p> <p>Page 33: Change picture to resemble subsampled readout more accurately</p> <p>Page 34-35: Remove Multiple Slope Operation</p> | | |

TIME LINE FOR CONVERSION:

This PB is effective immediately.

FOR ANY QUESTIONS CONCERNING THIS NOTIFICATION:

If purchasing ON Semiconductor image sensors from a distributor, please contact your distributor. If buying directly from ON Semiconductor, contact your local ON Semiconductor sales office or a customer service representative.
