

AD2150 Two-Wire Voice Dialler

The 2 wire voice dialler is a microprocessor based voice dialler and can dial up to 3 different numbers in the event of an alarm activation. It has the advantages of two wire connectivity but is universal and can be used with most hardwire alarm panels.

This dialler would complement any installation and notify up to three key holders that an alarm has been recorded so remedial action could be taken.

Product Specification

Technical Specification

Microprocessor based automatic voice dialler

Dials 3 telephone numbers, each number 16 digits

Dialling mode: Tone

Pre-stored message length: 20 seconds

Trigger type: Dry contact N/O

Power supply: 12vdc

Power consumption: 10mA (standby)

Order Number

LY52-013-38
