Raspberry PI(tm)  
& Projects

## Feel-good Typing in a Compact Design

Need a low-cost but durable USB multimedia keyboard that's easy to take around?

The new Compoint **CP-K7070** is your ideal travel companion, be it for your Windows(tm) or Mac(tm) notebook, or for your computer design projects such as prototyping with the Raspberry PI(tm) and other small, form factor computers.

Being small does not mean its small on features. Take for example full Windows(tm) specific shortcut keys, on-board common multimedia functionality such as volume, brightness and more.

Comfort and durability is the name of the game and apart from just about the perfect tilt angle and tactile key feedback, the CP-K7070 also enjoys a full Plug n' Play generous length USB cable, so its ideal for normal, and not so normal computer input operations such as kiosk control and smart homes.

Supplied in a low profile, retail package that's ideal for general posting that helps keep shipment costs to a minimum.

## Advanced features:

### Compact multimedia travel keyboard

Popular shortcut keys for popular Operating Systems\*

### Low-profile design - perfectly angled for comfort

Windows(tm) specific shortcut keys

### Driverless USB Plug n' Play design - for all systems\*\*

Durable design - 10 million keystroke duration

### Ideal for notebooks, desktops, tablets and kiosks

The perfect partner for projects such as Raspberry PI(tm)

### Compatible with Windows10(tm), Mac OS(tm)

\* Additional keystrokes maybe required  
\*\*Single USB port required

 Windows 10
