## Part change notification part group 3611

Dear Ladies and Gentleman;

Lumberg Holding GmbH & Co. KG - Postfach 1360 - 58569 Schalksmühle - Germany  
As a user of Lumberg 361x series connectors, we would like to inform you about a part change. The 361x series are RAST-5, screw-threaded connectors and lift clamp with protection against misplacing.

To achieve a more homogeneous injection process we have changed the insulation housing at various points. For a better understanding, you can find before / after comparisons in the attached presentation.

We point out that the reasons for these changes are production related and have no functional relevance regarding plug geometry, compatibility, clearance and creepage distances, approvals etc.

Due to existing stock levels, it may occur a parallel delivery of both versions.

The mentioned changes will first be implemented for part group 3611. Further series such as 3612-3614 will be changed later on. We will provide the information about these changes separately.

We kindly ask you to inform your incoming goods inspection accordingly about this change in order to avoid complaints or return deliveries.

Thank you for your understanding.

With Best Regards

Lumberg Connect GmbH  
Rahel Krämer
