BlueNRG-Tile – Bluetooth LE enabled sensor node development kit

Features

- STEVAL-BCN002V1B evaluation kit with STEVAL-BCN002V1 sensor board and STEVAL-BCN002V1D programming board.
- STEVAL-BCN002V1 sensor board:
  - BlueNRG-2: Bluetooth Low Energy single-mode system-on-chip
  - LSM6DSO: iNEMO 6DoF inertial module, ultra-low power and high accuracy
  - LIS2MDL: magnetic sensor, digital output, 50 gauss magnetic field dynamic range, ultra-low power, high performance, 3-axis magnetometer
  - VL53L1X: long range Time-of-Flight sensor based on ST FlightSense technology
  - MP34DT05TR-A: MEMS audio sensor omnidirectional digital microphone, 64 dB SNR, -26 dBFS sensitivity, top-port, 122.5 dBSPL AOP
  - LPS22HH: ultra-compact piezo-resistive absolute pressure sensor, 260-1260 hPa, digital output barometer, full-mold dust resistant, holed LGA package (HLGA)
  - HTS221: capacitive digital sensor for relative humidity and temperature
  - CR2032 battery powered (not included)
- STEVAL-BCN002V1D programming board:
  - program and debug firmware running on sensor board
  - supply power to the sensor board
- ST BlueMS demo app available on Android (Google Play) and iOS (iTunes)
- Target Applications:
  - Internet of Things, Smart Building, Home and City
  - Tracking System, Supply Chain/ Cold-Chain Management
  - Smart Agriculture (soil control, animal activity tracking, etc.)

Description

The STEVAL-BCN002V1B Bluetooth LE enabled sensor node development kit features the STEVAL-BCN002V1 multi-sensor board based on BlueNRG-2 SoC Bluetooth Low Energy application processor. This sensor board has accelerometer, gyroscope, magnetometer, pressure, humidity, Time-of-Flight and microphone sensors, and is powered by a common CR2032 coin battery.

The sensor board communicates with a Bluetooth LE enabled smartphone running the ST BlueMS APP, available on Google Play and iTunes stores.

The STEVAL-BCN002V1D adapter board is used to program and debug the sensor board. The adapter board is powered via USB.
1 Component layout

Figure 1. STEVAL-BCN002V1 sensor node front and rear components

4e. TEST 
4f. VDD 
4g. GND 
4h. RFTEST 
5a. IL-network (not mounted) 
5b. SMD antenna 
6a. Inductor to enable lowest power BLE active mode 
6b. 32kHz crystal to enable lowest power BLE sleep mode 
7a. Battery holder 
7b. CR2032 battery (not included) 
8. 10-pin connector 

FCC ID: S9NSTEBCN2V1 IC ID: 8976C-STEBCN2V1
Figure 2. STEVAL-BCN002V1D host board for programming and debugging

Top side components:
1. ST-LINK V3 debugger
2. 20 pin JTAG/SWD for ext. ST-LINK V2

Bottom side components:
1. VCOM for STM32L151
2. 5 pin JTAG/SWD for Nucleo ST-LINK
3 How to set up the STEVAL-BCN002V1D board

Use the configurations below to set up the STEVAL-BCN002V1D board according to your requirements.

If plugged on a NUCLEO ST-LINK board:

**Step 1.** Place 0 Ω resistors (short) on R6 and R8.

**Step 2.** For programming: load the firmware via the NUCLEO ST-LINK mini USB connector.

**Step 3.** For virtual COM: use the NUCLEO ST-LINK mini USB connecter
both SW3 and SW2 must be in (P1-P2) position

If using an external JTAG debugger:

**Step 4.** For programming: use the JTAG connector on the top side of the STEVAL-BCN002V1D board.

**Step 5.** For virtual COM: use the micro USB connector on the bottom side of the STEVAL-BCN002V1D board.

**Step 6.** both SW3 and SW2 must be in (P1-P2) position.
both SW3 and SW2 must be in (P2-P3) position

If using the integrated USB to UART interface:

**Step 7.** For programming: use the micro USB connector on the bottom and use the BlueNRG-1 Flasher Utility only

**Step 8.** For virtual COM: use the micro USB connector on the bottom side of the STEVAL-BCN002V1D board.
both SW3 and SW2 must be in (P2-P3) position

If using the integrated ST-LINK/V3:

**Step 9.** Place 0 Ω resistors (short) on R4 and R14.

**Step 10.** For programming: use the ST-LINK/V3 SWD.

**Step 11.** For virtual COM: use the ST-LINK/V3 micro USB.
both SW3 and SW2 must be in (P1-P2) position
4 Certification

4.2 FCC and IC
The STEVAL-BCN002V1B kit has been tested and complies with the FCC part 15 and IC RSS-210 regulations. These limits are designed to provide reasonable protection against harmful interference in approved installations. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions:
1. The device must not cause harmful interference.
2. The device must accept any interference received, including interference that may cause undesired operation.

Modifications or changes to this equipment not expressly approved by the party responsible for compliance may render void the user's authority to operate this equipment.

4.3 CE
The STEVAL-BCN002V1B kit complies with the following European EMI/EMC and safety directives and standards:
- EN 300 328 V 2.1.1 (2016-11) (a)
- ETSI EN 301 489-17 V3.1.1 (2017-02) (b)
- ETSI EN 301 489-1 V2.1.1 (2017-02) (c)
- EN 62479:2010

The module has the CE marking:

![CE marking](image)

The module has obtained the RED certificate: No. 0051-RED-0010 REV. 0
The certified module production firmware release is: 1.X
