Evaluation Board for LC709203FXE-01 WLCSP9 Battery Fuel Gauge

MPN - LC709203FXE-01-GEVB

Overview:

Evaluation board for the LC709203F IC that measures the remaining power level of 1-cell lithium-ion (Li+) batteries used for a portable equipment etc. This product is able to reduce a fuel gauge errors by implementing its unique correction technology for measurement value of battery temperature and voltage. It is possible for this to realize high precision for measurement in battery power measurement IC that does not need a current sensing resistor. This board demonstrates the part in an WLCSP9 package.

Evaluation/Development Tool Information

Product	Status	Compliance	Short Description	Parts Used
LC709203FXE-01-GEVB	Active	Pb-free	Evaluation Board for LC709203FXE-01 WLCSP9 Battery Fuel Gauge	LC709203FXE-01MH
