- | | |
|----------|---|
| A | No supplementary charge required
(Carry out supplementary charge before use if 100% capacity is required.) |
| B | Supplementary charge required before use. Optional charging way as below:
1. Charged for above 3 days at limited current 0.25CA and constant voltage 2.25V/cell.
2. Charged for above 20 hours at limited current 0.25CA and constant voltage 2.45V/cell.
3. Charged for 8-10 hours at limited current 0.05CA. |
| C | Supplementary charge may often fail to recover the capacity.
The battery should never be left standing till this is reached. |

Technology Low-Down

The LP series features a range of batteries which utilise AGM technology, with the electrolyte inside the battery absorbed in a specially designed fiberglass material. This means that all the batteries in this range are entirely maintenance-free and can be mounted in any orientation without the risk of leakage. The absorbed electrolyte also means AGM batteries are more resistant to vibrations, impacts and sudden temperature fluctuations than their traditional lead-acid counterparts.
