W 60 x L 265 x H 143mm

Product Weight

0.5kg

Build and code your own robot

Use a BBC micro:bit (not included) to bring Totem Spider to life. No complicated software needed - just write code on a web page using Block Editor. Simply build and attach the sensor boards included in the kit and your robot comes alive. Create anything from a sensitive animal e.g. touch and it will be angry with flashing red lights to programming the spider to move up and down on its web - the possibilities are endless!
