

Part Number: 8.16.28 J-LINK ULTRA+

Description: Programmer, J-Link Ultra+

Based on the highly optimized and proven J-Link, the J-Link ULTRA+ (J-Link ULTRA Plus) offers even higher speed. This is due to the faster CPU, built-in FPGA and High Speed USB interface. This ARM/Cortex Debug Probe, Microchip PIC32 Debug Probe, Renesas RX Debug Probe, and SiLabs EFM8 / C8051 Debug Probe. Includes a USB cable, and a 20-pin, 0.1" ribbon cable. Other adapters for various connection types are also available (Sold Separately). No power supply required (driven and powered through USB). Includes unlimited Flash breakpoints (Unlimited Flash Breakpoints), the ARM Remote Debug Interface (RDI), remote GDB server for the GNU Project Debugger (GDB Server), Flash Loaders, and software to program internal and external flash of your microcontroller (J-Flash).
