ITT Cannon Product Quality Notification- Component Change for Trident Connector Series

Dear Valued Customer:

This letter is to inform you that ITT Cannon has approved a new rubber component (insulators, grommets, etc...) supplier for the Trident Series. This sourcing change was a long process but required due to our previous supplier's decision to rationalize their business and stop production of impacted rubber components.

ITT is committed to the highest quality standards and is currently qualifying and testing all related products to meet Trident Series specifications. As a result, the new components will have the same form, fit and function with no visual differences between components and final assembly. The qualification and testing process is planned to be completed by the end of April 2019, with mass production starting by mid May 2019.

Attached to this letter we are distributing the list of part numbers that will utilize the new rubber components.

We are strongly committed to minimize the impact during the transition phase. If you have any questions regarding deliveries or detailed backlog management, please contact your ITT Sales representative or your local Customer Service.

For any other product-related questions, please contact ITT Regional Product Management.

Sincerely,

ITT Cannon GmbH
