## The Greatest Little PIC Book

The Greatest Little PIC Book, by Gordon MacNee, covers the new 8 pin PIC12C50x family from Microchip. This device is ideal for those applications requiring a few I/O lines. The book has been written to guide the potential user through the architecture, software modes and benefits derived from using the PIC12C50x. The book also covers development tools and is supplied with MPLAB (editor, assembler and simulator) to enable development under Windows. The book is rounded off with a number of worked examples including timers, sound generators, water descaler, data logger and light/motor control.
