

LTC0455/10

Series LTC 0455 is formed by digital cameras CCD to color with format of image of 1/3 of inch, compact and resistant.

Their superior sensitivity, resolution and quality of image guarantee the best results in practically any situation.

The visualization in screen (OSD) provides a fast and simple access to all the functions of the camera.

Cameras LTC 0455 also are provided with a lens assistant that detects the installed type of lens automatically and provides a guide OSD who allows the installer to easily fit to the level of the lens and the approach with no need to use special tools or filters.

The function of automatic black level, now incorporated in the cameras to color, improves the resistance when eliminating the veil of brightness of the image.

Characteristics:

Converter of image CCD with format of 1/3 of inch.

The high sensitivity.

Advanced processing of DS.

Hi-res with quality of extraordinary image.

Automatic detection of the type of lens.

Sensitivity extended with NightSense ".

It accepts tensions of CA or CC.
