

Important Changes in the range of Miniature Circular Connectors of 678 / 680 / 682 series

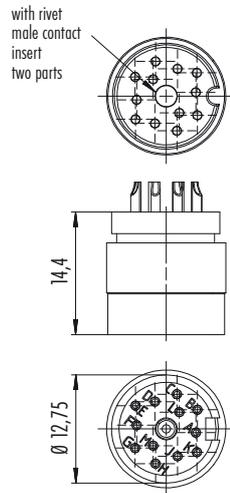

Dear Sir/Madam,

We want to continuously optimize our products and therefore we improved the male contact inserts of the 12 to 19-pole versions. This improvement affects all male versions of the series 678, 680 and 682 (field attachables, straight, angled and panel mount parts).

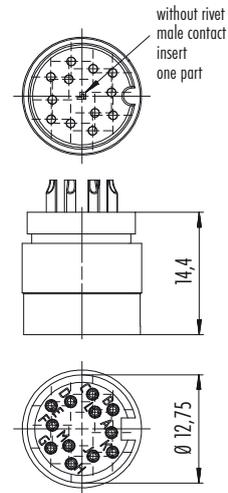

In the past the contact inserts have been two parts and in the future it will only be one part. There will be no dimensional change. Visually you will be able to see the difference as the rivet is missing. The contacts will be fixed mounted instead of floated-mounted.

All changes do not lead to application changes. The current versions can be replaced 1:1 with the new versions.

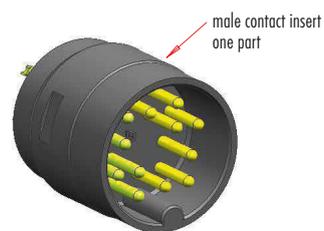

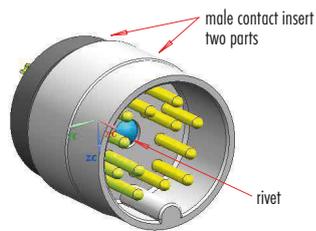

Previous contact insert

New contact insert

Representative example with 12 poles.
Also applies for 14, 16 and 19 poles.

The change of the articles will take place in June 2019. We will replace article after article so it may occur that you receive both versions in one delivery.

Do you still have questions? Our customer service will be glad to help you.

Kind regards
