

SPECIFICATION

Product Name	Cable Tongue PRO
Item Code	SRCT-PRO
Length (Cable Tongue)	3.6 meters

ABOUT

Cable Tongue Pro is designed for pulling cables through walls, above ceilings, below floors and anywhere else a cable needs to go. The new Cable Tongue Pro has a new fitting allowing you to use Super Rod attachments.

IT'S FLAT

Well it's about time, isn't it? There are 100's of tools on the market designed for pulling cables, none of which are flat. Have you ever tried to pull cables past insulation in a wall? The Tongue is flat, therefore it will keep a straight path up the wall.

STRONG AND FLEXIBLE

The Tongue can be stored straight or coiled, the specially designed plastic allows you to bend and twist it into the shape you need.

PERFECT DIMENSIONS

The right length for gaining access into 99% of walls, the thickness of the Cable Tongue Pro allows flexibility with strength. This allows the Tongue to slide through walls and prevent veering off in another direction.

COMPATIBILITY

Thanks to the new fitting Cable Tongue Pro can now be used with a range of Super Rod attachments and comes with a 11-15 mm Super Grip, Domed Bullet and Mini Hook included.

APPLICATION

When you receive your new Cable Tongue Pro, it will be tightly coiled for shipping. Some people prefer to keep the tongue like this for storage in a tool bag but most professionals choose to coil the Tongue back on itself in a large loop and tape. This will mean the tongue is still coiled but is more manageable. Another option for Cable Tongue storage is in a van roof tube. This keeps the tongue completely straight.

Example of use: If the Tongue is being used to pull cables through a partition wall (insulation filled plaster board wall with vertical braces), then you will need a hole where the Tongue will enter the wall and an exit hole. Simply push the Tongue into the entry hole and the Tongue will slide past any insulation or obstructions in the wall due to its unique smooth, flat shape. Once the Tongue has exposed itself at the exit hole, you will now need to tape your cables onto the rear of the Tongue. You can now pull your cables through making sure that you guide the cables through smoothly eliminating any damaged cables. You can use Super Rod attachments with the Cable Tongue Pro to make routing even easier. For example simply attach your cable to the Cable Tongue Pro using a Super Grip thereby eliminating the need for taping the cable on.
