### Engineering Change Notice

All connectors featuring a Reed switch have to pass a 100% electric quality test before shipping. This test showed partially right angle silentPLUGs whose Reed contact had no contact to the sleeve solder area. To guarantee contact, solder was added in this area. Due to the 100% quality test which is performed with all products featuring the Reed switch, there are no defective products on the market.

Reed Switch

Solder to guarantee contact between Reed and Sleeve
