

## FineAdjust Applicator

# **Application Tooling Specification Sheet**

Order No. 63902-5300

### **FEATURES**

- Quick punch removal with the push of a button for fast and easy tooling change
- Applicator designed to industry standard mounting and shut height 135.80mm (5.346")
- Quick set-up time; plus the crimp height, track and feed adjustments can be set without removing the applicator from the press
- Fine adjustment allows users to achieve target with little effort by adjusting in increments of 0.15mm (.0006") for conductor crimp height and .063mm (.0025") for insulation height
- Independent adjustment rings allow users to quickly adjust the conductor or insulation crimp height without affecting each other
- Directly adapts to most automatic wire processing machines

### **SCOPE**

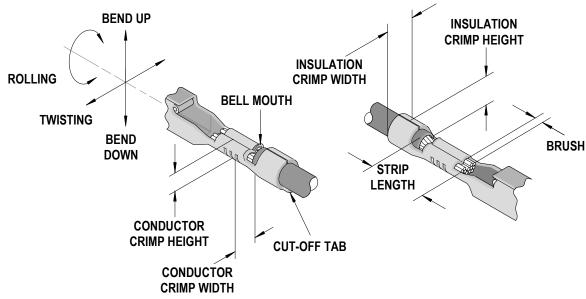

Products: MX64<sup>™</sup> ISO Terminal, 0.50-0.75mm<sup>2</sup> wire.

After crimping, the conductor profile should measure the following.

Tarminal	Wire Size		Conductor				Insulation				Pull Force	
Terminal			Crimp Height		Crimp Width		Crimp Height		Crimp Width		Minimum	
Series No.	Wire Type	mm²	mm	ln.	mm	ln.	mm	ln.	mm	ln.	N	Lb.

Pull Force should be measured with no influence from the insulation crimp. The above specifications are guidelines to an optimum crimp.

### NOTE:

► Straightness:

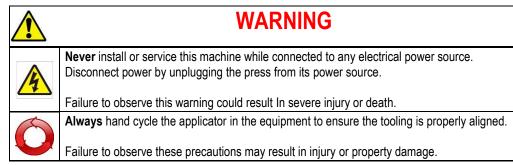

A Crimped terminal lead must be able to pass freely through the Checking Aid ▶, Part No.63867-3008.

B Wire on the crimped lead must meet all specification above.

### **Wire Stop Set-Up Positioning Procedure**

In order to maintain the conductor brush within the specifications the following set-up procedure needs to be followed.

1. Manually cycle the press until the press ram with the punches is in the full down position.

**CONDUCTOR PUNCH** 

- 2. Adjust the wire stop blade down towards the terminal as close as possible to the terminal transitional surface. See Figure 1.
- 3. Adjust the clearance between the wire stop blade and the conductor punch to 0.03mm (.001") maximum.

# .03mm (.001") Maximum Clearance ADJUST WIRE STOP WIRE STOP

- 4. Manually cycle the press until the press ram is in the full up position.
- 5. Manually cycle the press again, to make sure the terminals are feeding properly.
- 6. Power up the press and crimp terminals without wire to make sure they are feeding properly

7. Crimp terminals with wire and check for proper feeding.

### **NOTES**

- 1. Molex recommends an extra perishable tooling kit be maintained at your facility.
- 2. Verify tooling alignment by manually cycling the press and Applicator before crimping under power. Check that all screws are tight.
- 3. Slugs, Terminals, Dirt and Oil should be kept clear of work area.
- 4. Wear safety glasses at all times.
- 5. For recommended maintenance refer to the FineAdjust Manual.

CAUTION: This applicator should only be used in a press with a shut height of 135.80 mm (5.346"). Tooling damage could result at a lower setting.

CAUTION: To prevent injury never operate this Applicator without the guards supplied with the press or wireprocessing machine in place. Reference the press or wire processing manufacturer's instruction manual.

**CAUTION**: Molex crimp specifications are valid only when used with Molex terminals, applicators and tooling.
