1. The following icons are absolutely designed by FORDATA independently in 2007-SEP. They are unique in the LCD industry and are used for marking out FORDATA products' characteristics quickly and simply without any special meaning. FORDATA reserves the composing right and copyright. No one else is allowed to adopt these icons without FORDATA's approval.
2. The ISO9001 logo used in this document is authorized by SGS (www.sgs.com). FORDATA has already successfully passed the strict and professional ISO9001:2000 Quality Management System Certification and got the certificate. (No.: CN07/00404)
3. The technologies/techniques/crafts which denoted by the following icons are not exclusively owned by FORDATA but also shared by FORDATA's LCD strategic cooperators, however all these technologies/techniques/crafts have been finally confirmed by FORDATA's professional engineers and QC department.
4. As the difference in test standard and test conditions, also FORDATA's insufficient familiarity with the actual LCD using environment, all the referred information in this DATASHEET (including the icons) only have two functions:
  - 4.1: providing quick reference when you are judging whether the product meets your requirements or not.
  - 4.2: listing out the tolerance.

**FORDATA declares seriously:** you should first test the corresponding sample(s) before signing the formal FORDATA SAMPLE APPROVAL document rather than consider this DATASHEET as the standard for judging whether the LCD meets your requirements or not. Once you place bulk order(s) to FORDATA without testing samples. FORDATA will disclaim all responsibility if the mass-production is proved not to meet with your requirements.
5. The sequence of the icons is random and doesn't indicate the importance grade.

6. Icons explanation

▲2 请注意, 驱动背光考虑的是恒流而不是恒压. 所以, 这个数值非常重要!

YOUR ATTENTION: It is constant current (not constant voltage) that should be applied when driving LED backlight. Therefore, this data is very important!

\* 当工作温度高于25 °C时, Ifm, Ifp和Pd必须降低; 电流降低率是 -0.36\*1mA/°C (直流驱动), 或-0.86\*1 mA/°C (脉冲驱动), 功率降低率是-75\*1mW/°C. 产品工作电流不能大于对应的工作条件温度Ifm或Ifpr的60%.  
For operation above 25 °C, The Ifm Ifp & Pd must be derated, the Current derating is -0.36\*1mA/°C for DC drive and -0.86\*1 mA/°C for Pulse drive, the power dissipation is -75\*1 mW/°C The product working current must not be more than 60% of the Ifm or Ifp according to the working temperature.

▲3 如果您需要让背光连续不间断工作超过8小时, 那么不建议您采用这款背光. 福德电子可以提供您长寿背光的解决方案.

If you want to drive the LED Backlight uninterruptedly over 8hours, this version is not suggested. Please consult long life design solution from FORDATA or FORDATA's authorized distributors.
