

MDOB128032FCV-BM	128 x 32	OLED Module
Specification		
Version: 1	Date: 09/02/2021	
Revision		
1	08/02/2021	First Issue

Display Features			
Resolution	128 x 32		
Appearance	Blue on Black		
Logic Voltage	3.3V		
Interface	Parallel, SPI, I2C		
Module Size	66.50 x 35.00 x 9.00 mm		
Operating Temperature	-40°C ~ +80°C		
Construction	COB	Box Quantity	Weight / Display
		---	---

* - For full design functionality, please use this specification in conjunction with the SSD1305 specification. (Provided Separately)

Display Accessories	
Part Number	Description

Optional Variants	
Appearance	Voltage

General Specification

The Features is described as follow:

- Module dimension: 66.5 x 35.0 x 9.0(Max)
- Active area: 55.018 x 13.098 mm
- Dot Matrix: 128*32
- Pixel size: 0.408 x 0.388 mm
- Pixel pitch: 0.43 x 0.41 mm
- Display Mode : Passive Matrix
- Duty: 1/32 Duty
- Display Color: Blue
- IC: SSD1305
- Buzzer: OBO-11241SB
- Vibration Motor: W0625AB001F
- Interface: 6800, 8080, 4-Wire SPI, I2C
- SIZE:2.23 inch

design • manufacture • supply

Interface Pin Function

No.	Symbol	Function
1	VSS	Ground.
2	VDD	Power supply pin for core logic operation.
3	V0	Power supply for panel driving voltage. No connection.
4	D/C#	This is Data/Command control pin. When it is pulled HIGH (i.e. connect to VDDIO), the data at D[7:0] is treated as data. When it is pulled LOW, the data at D[7:0] will be transferred to the command register. In I2C mode, this pin acts as SA0 for slave address selection.
5	R/W#	This is read / write control input pin connecting to the MCU interface. When interfacing to a 6800-series microprocessor, this pin will be used as Read/Write (R/W#) selection input. Read mode will be carried out when this pin is pulled HIGH (i.e. connect to VDDIO) and write mode when LOW. When 8080 interface mode is selected, this pin will be the Write (WR#) input. Data write operation is initiated when this pin is pulled LOW and the chip is selected. When serial interface is selected, this pin must be connected to VSS.
6	E/RD#	When interfacing to a 6800-series microprocessor, this pin will be used as the Enable (E) signal. Read/write operation is initiated when this pin is pulled HIGH (i.e. connect to VDDIO) and the chip is selected. When connecting to an 8080-microprocessor, this pin receives the Read (RD#) signal. Read operation is initiated when this pin is pulled LOW and the chip is selected. When serial interface is selected, this pin must be connected to VSS.
7~14	DB0~DB7	These are 8-bit bi-directional data bus to be connected to the microprocessor's data bus. When serial interface mode is selected, D0 will be the serial clock input: SCLK; D1 will be the serial data input: SDIN and D2 should be left opened. When I2C mode is selected, D2, D1 should be tied together and serve as SDAout, SDAin in application and D0 is the serial clock input, SCL.
15	CS#	This pin is the chip select input. (active LOW)
16	RES#	This pin is reset signal input. When the pin is LOW, initialization of the chip is executed. Keep this pin HIGH (i.e. connect to VDDIO) during normal operation.

17,18	BS2,BS1	Communicating Protocol Select. These pins are MCU interface selection input. See the following table:				
			68XX-parallel	80XX-parallel	Serial	I2C
		BS1	0	1	0	1
		BS2	1	1	0	0
19	N.C.	No connection.				
20	FG(GND)	Ground.				
21~25	N.C.	No connection.				
26	VSS	Ground.				
27	BSW	Control the Piezoelectric Buzzer.				
28	MSW	Control the BLDC Vibration Motor.

The non-specified tolerance of dimension is ; $\varnothing 3 \text{ mm}$.

1. Application recommendations

Recommended components :

C1 : 1.0uF

Note

(1) The capacitor value is recommended value. Select appropriate value against module application.

2. BLDC Vibration Motor

Work: MSW=0V

Un-work: MSW=VDD

3. Piezoelectric Buzzer

Sound Pressure Level: 70dB Min. at 4.1KHz/VDD Square Wave/10cm.

Current Consumption: 3mA Max. at 4.1KHz/ VDD Square Wave.

Absolute Maximum Ratings

Parameter	Symbol	Min	Max	Unit	Notes
Supply Voltage for Logic	VDD	-0.3	4.0	V	1, 2
Operating Temperature	TOP	-40	+80	°C	-
Storage Temperature	TSTG	-40	+85	°C	-

Note 1: All the above voltages are on the basis of “VSS = 0V”.

Note 2: When this module is used beyond the above absolute maximum ratings, permanent breakage of the module may occur. Also, for normal operations, it is desirable to use this module under the conditions according to Section 6 “Electrical Characteristics”. If this module is used beyond these conditions, malfunctioning of the module can occur and the reliability of the module may deteriorate

Electrical Characteristics

1. DC Electrical Characteristics

Item	Symbol	Condition	Min	Typ	Max	Unit
Supply Voltage for Logic	VDD	—	2.4	3.3	3.5	V
Input High Volt.	VIH	—	$0.8 \times VDD$	—	VDD	V
Input Low Volt.	VIL	—	0	—	$0.2 \times VDD$	V
Output High Volt.	VOH	IOUT = 100uA, 3.3MHz	$0.9 \times VDD$	—	VDD	V
Output Low Volt.	VOL	IOUT = 100uA, 3.3MHz	0	—	$0.1 \times VDD$	V
Supply Voltage for Buzzer	BSW	50% square	$0.8 \times VDD$	—	VDD	V
Supply Voltage for Vibration Motor	MSW	Note 1	2.7	—	3.3	V
Operating Current at Display with 50% Check Board	IDD	VDD=3.3V	-	90	120	mA

Note:

1. Operating consumption current: 80mA Max
2. Starting current: 175mA Max

design • manufacture • supply

2. Initial code

```
void Initial_SSD1305(){  
    Write_command(0xAE); //Display Off  
  
    Write_command(0xAD); //Master Configuration  
    Write_command(0x8E); //Select external VCC supply  
  
    Write_command(0xA8); //Select Multiplex Ratio  
    Write_command(0x1F); //0x1F(1/32 Duty)  
  
    Write_command(0xD3); //Setting Display Offset  
    Write_command(0x00); //00H Reset  
  
    Write_command(0x20); //Set Memory Addressing Mode  
    Write_command(0x02); //Page Addressing Mode  
  
    Write_command(0x00); //Set Column Address LSB  
  
    Write_command(0x10); //Set Column Address MSB  
  
    Write_command(0x40); //Set Display Start Line  
  
    Write_command(0xA6); //Set Normal Display  
  
    Write_command(0xDB); //Set Deselect Vcomh level  
    Write_command(0x3C); //~0.83xVCC  
  
    Write_command(0xA4); //Entire Display ON  
  
    Write_command(0x81); //Set Contrast Control  
    Write_command(0x3F);  
  
    Write_command(0xD5); //SET DISPLAY CLOCK  
    Write_command(0x71); //105HZ  
  
    Write_command(0xA1); //Set Segment Re-Map Default => 0xA0  
    //0xA1 (0x01) => Column Address 0 Mapped to SEG131  
    Write_command(0xC8); //Set COM Output Scan Direction Default => 0xC0  
    //0xC8 (0x08) => Scan from COM63 to 0  
    Write_command(0xDA); //Set COM Hardware Configuration  
    Write_command(0x12); //Alternative COM Pin  
  
    Write_command(0xD9); //Set Pre-Charge period  
    Write_command(0x22);  
  
    Write_command(0xAF); // Display ON  
}
```

Note1: Initial code is for reference only. Please make the best adjustment with the OLED module.

Note2: Command: Set Contrast Control (0x81) , This command sets the Contrast Setting of the display. The chip has 256 contrast steps from 00h to FFh. The segment output current increases as the contrast step value increases. The segment current increases, the OLED brightness increases.

I2C-bus data format

Note:

- Co – Continuation bit
- D/C# – Data / Command Selection bit
- ACK – Acknowledgement
- SA0 – Slave address bit
- R/W# – Read / Write Selection bit
- S – Start Condition / P – Stop Condition

Slave Address

Control byte

(a) I2C address bit (SA0)

The slave address is following the start condition for recognition use. The slave address is either "b0111100" or "b0111101" by changing the SA0 to LOW or HIGH (D/C pin acts as SA0).

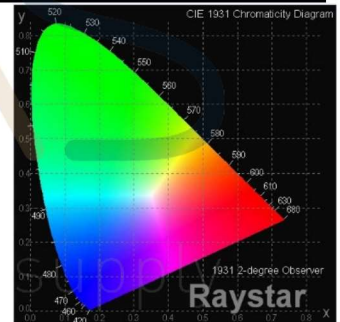

(b) "R/W#" bit is used to determine the operation mode of the I2C-bus interface. R/W#=1, it is in read mode. R/W#=0, it is in write mode.

(c) After the transmission of the slave address, either the control byte or the data byte may be sent across the SDA. A control byte mainly consists of Co and D/C# bits following by six "0"s.

- a. If the Co bit is set as logic "0", the transmission of the following information will contain data bytes only.
- b. The D/C# bit determines the next data byte is acted as a command or a data. If the D/C# bit is set to logic "0", it defines the following data byte as a command. If the D/C# bit is set to logic "1", it defines the following data byte as a data which will be stored at the GDDRAM. The GDDRAM column address pointer will be increased by one automatically after each data write.

Optical Characteristics

Item	Symbol	Condition	Min	Typ	Max	Unit
View Angle	(V) θ	—	160	—	—	deg
	(H) ϕ	—	160	—	—	deg
Contrast Ratio	CR	Dark	10,000:1	—	—	—
Response Time	T rise	—	—	10	—	μ s
	T fall	—	—	10	—	μ s
Display with 50% check Board Brightness			80	100	—	cd/m2
CIEx(Blue)		x,y(CIE1931)	0.12	0.16	0.20	—
CIEy(Blue)		x,y(CIE1931)	0.19	0.23	0.27	—

OLED Lifetime

ITEM	Conditions	Min	Typ	Remark
Operating Life Time	Ta=25°C / Initial 50% check board brightness Typical Value	20,000 Hrs	-	Note

Notes:

1. Life time is defined the amount of time when the luminance has decayed to <50% of the initial value.
2. This analysis method uses life data obtained under accelerated conditions to extrapolate an estimated probability density function (*pdf*) for the product under normal use conditions.
3. Screen saving mode will extend OLED lifetime.

Reliability

Content of Reliability Test

Environmental Test			
Test Item	Content of Test	Test Condition	Applicable Standard
High Temperature storage	Endurance test applying the high storage temperature for a long time.	85°C 240hrs	—
Low Temperature storage	Endurance test applying the low storage temperature for a long time.	-40°C 240hrs	—
High Temperature Operation	Endurance test applying the electric stress (Voltage & Current) and the thermal stress to the element for a long time.	80°C 240hrs	—
Low Temperature Operation	Endurance test applying the electric stress under low temperature for a long time.	-40°C 240hrs	—
High Temperature/ Humidity Storage	Endurance test applying the high temperature and high humidity storage for a long time.	60°C,90%RH 240hrs	—
High Temperature/ Humidity Operation	Endurance test applying the high temperature and high humidity Operation for a long time.	60°C,90%RH 120hrs	—
Temperature Cycle	Endurance test applying the low and high temperature cycle. <div style="text-align: center;"> <p>-40°C 25°C 80°C 30min 5min 30min</p> </div>	-40°C /80°C 30 cycles	—
Mechanical Test			
Vibration test	Endurance test applying the vibration during transportation and using.	Frequency:10~55Hz amplitude:1.5mm Time:0.5hrs/axis Test axis:X,Y,Z	—
Others			
Static electricity test	Endurance test applying the electric stress to the finished product housing.	Air Discharge model ±4kv,10 times	—

*** Supply voltage for OLED system =Operating voltage at 25°C

Test and measurement conditions

1. All measurements shall not be started until the specimens attain to temperature stability. After the completion of the described reliability test, the samples were left at room temperature for 2 hrs prior to conducting the failure test at $23\pm5^{\circ}\text{C}$; $55\pm15\%$ RH.
2. All-pixels on/off exchange is used as operation test pattern.
3. The degradation of Polarizer are ignored for High Temperature storage, High Temperature/ Humidity Storage, Temperature Cycle

Evaluation criteria

1. The function test is OK.
2. No observable defects.
3. Luminance: $> 50\%$ of initial value.
4. Current consumption: within $\pm 50\%$ of initial value.

APPENDIX:**RESIDUE IMAGE**

Because the pixels are lighted in different time, the luminance of active pixels may reduce or differ from inactive pixels. Therefore, the residue image will occur. To avoid the residue image, every pixel needs to be lighted up uniformly.

Inspection specification

Inspection Standard:

MIL-STD-105E table normal inspection single sample level II.

Definition

1 Major defect : The defect that greatly affect the usability of product.

2 Minor defect : The other defects, such as cosmetic defects, etc.

Definition of inspection zone:

Zone A: Active Area

Zone B: Viewing Area except Zone A

Zone C: Outside Viewing Area

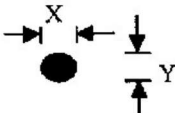

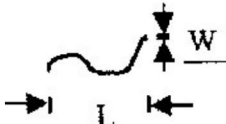

Note: As a general rule, visual defects in Zone C are permissible, when it is no trouble of quality and assembly to customer's product.

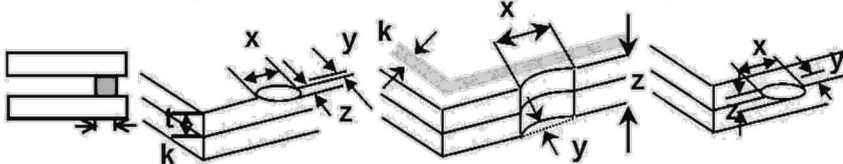

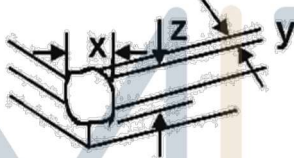

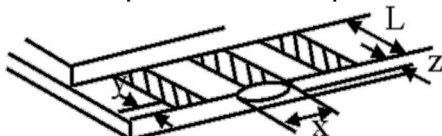

Inspection Methods

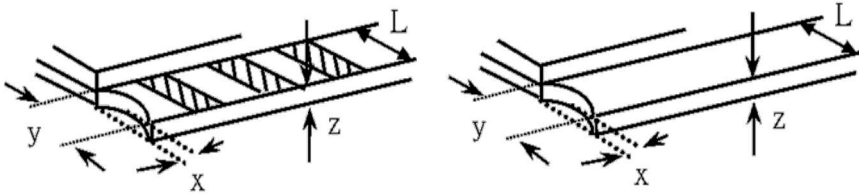

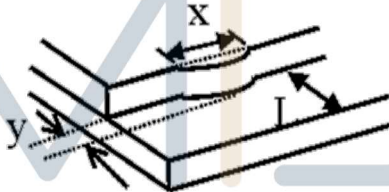

1 The general inspection : Under fluorescent light illumination: 750~1500 Lux, about 30cm viewing distance, within 45° viewing angle, under 25±5°C.

2 The luminance and color coordinate inspection : By SR-3 or BM-7 or the equal equipments, in the dark room, under 25±5°C.

Precautions in use of OLED Modules

- (1) Avoid applying excessive shocks to module or making any alterations or modifications to it.
- (2) Don't make extra holes on the printed circuit board, change the components or modify its shape of OLED display module.
- (3) Don't disassemble the OLED display module.
- (4) Do not apply input signals while the logic power is off.
- (5) Don't operate it above the absolute maximum rating.
- (6) Don't drop, bend or twist OLED display module.
- (7) Soldering: only to the I/O terminals.
- (8) Hot-Bar FPC soldering condition: 280~350C, less than 5 seconds.
- (9) Midas has the right to change the passive components (Resistors, capacitors and other passive components will have different appearance and color caused by the different supplier.) and change the PCB Rev. (In order to satisfy the supplying stability, management optimization and the best product performance...etc, under the premise of not affecting the electrical characteristics and external dimensions, Midas have the right to modify the version.)
- (10) Midas has the right to upgrade or modify the product function.
- (11) Customers should reserve VCC (VPP) adjustment function or software update function when designing OLED supporting circuit. (The progress of OLED light-emitting materials will increase the conversion efficiency and the brightness. The brightness can be adjusted if necessary).

1. Handling Precautions

- (1) Since the display panel is being made of glass, do not apply mechanical impacts such as dropping from a high position.
- (2) If the display panel is broken by some accident and the internal organic substance leaks out, be careful not to inhale nor lick the organic substance.
- (3) If pressure is applied to the display surface or its neighborhood of the OLED display module, the cell structure may be damaged. So, be careful not to apply pressure to these sections.
- (4) The polarizer covering the surface of the OLED display module is soft and easily scratched.
- (5) When the surface of the polarizer of the OLED display module has soil, clean the surface. It takes advantage by using following adhesion tape.
 - * Scotch Mending Tape No. 810 or an equivalentNever try to breathe upon the soiled surface nor wipe the surface using cloth containing solvent such as ethyl alcohol, since the surface of the polarizer will become cloudy. Also, pay attention that the following liquid and solvent may spoil the polarizer:
 - * Water
 - * Ketone
 - * Aromatic Solvents
- (6) Protection film is being applied to the surface of the display panel and removes the protection film before assembling it. At this time, if the OLED display module has been stored for a long period of time, residue adhesive material of the protection film may remain on the surface of the display panel after removed of the film. In such case, remove the residue material by the method introduced in the above Section 5.
- (7) Do not touch the following sections whenever possible while handling the OLED display modules.
 - * Pins and electrodes
 - * Pattern layouts such as the TCP & FPC
- (8) Hold OLED display module very carefully when placing OLED display module into the System housing. Do not apply excessive stress or pressure to OLED display module. And, do not over bend the film with electrode pattern layouts. These stresses will influence the

display performance. Also, secure sufficient rigidity for the outer cases.

- (9) Do not apply stress to the LSI chips and the surrounding molded sections.
- (10) Pay sufficient attention to the working environments when handing OLED display modules to prevent occurrence of element breakage accidents by static electricity.
 - * Be sure to make human body grounding when handling OLED display modules.
 - * Be sure to ground tools to use or assembly such as soldering irons.
 - * To suppress generation of static electricity, avoid carrying out assembly work under dry environments.
 - * Protective film is being applied to the surface of the display panel of the OLED display module. Be careful since static electricity may be generated when exfoliating the protective film.

2. Storage Precautions

- (1) When storing OLED display modules, put them in static electricity preventive bags to avoid be directly exposed to sun or lights of fluorescent lamps. And, also, place in the temperature $25\pm5^{\circ}\text{C}$ and Humidity below 65% RH. (We recommend you to store these modules in the packaged state when they were shipped from Midas. At that time, be careful not to let water drops adhere to the packages or bags.)
- (2) When the OLED display module is being dewed or when it is placed under high temperature or high humidity environments, the electrodes may be corroded if electric current is applied. Please store it in clean environment.

3. Designing Precautions

- (1) The absolute maximum ratings are the ratings which cannot be exceeded for OLED display module, and if these values are exceeded, OLED display module may be damaged.
- (2) To prevent occurrence of malfunctioning by noise, pay attention to satisfy the VIL and VIH specification and to make the signal line cable as short as possible.
- (3) We recommend you to install excess current preventive unit (fuses, etc.) to the power circuit (VDD / VCC). (Recommend value: 0.5A)
- (4) Pay sufficient attention to avoid occurrence of mutual noise interference with the nearby devices.
- (5) As for EMI, take necessary measures on the equipment side basically.
- (6) If the power supplied to the OLED display module is forcibly shut down by such errors as taking out the main battery while the OLED display panel is in operation, we cannot guarantee the quality of this OLED display module.
 - * Connection (contact) to any other potential than the above may lead to rupture of the IC.
- (7) If this OLED driver is exposed to light, malfunctioning may occur and semiconductor elements may change their characteristics.
- (8) The internal status may be changed, if excessive external noise enters into the module. Therefore, it is necessary to take appropriate measures to suppress noise generation or to protect module from influences of noise on the system design.
- (9) We recommend you to make periodical refreshment of the operation statuses (re-setting of

the commands and re-transference of the display data) to cope with catastrophic noise.

- (10) It's pretty common to use "Screen Saver" to extend the lifetime and Don't use the same image for long time in real application. When an OLED display module is operated for a long of time with fixed pattern, an afterimage or slight contrast deviation may occur.
- (11) The limitation of FPC and Film bending.

- (12) The module should be fixed balanced into the housing, or the module may be twisted.

- (13) Please heat up a little the tape sticking on the components when removing it; otherwise the components might be damaged.

4. Precautions when disposing of the OLED display modules

- (1) Request the qualified companies to handle industrial wastes when disposing of the OLED display modules. Or, when burning them, be sure to observe the environmental and hygienic laws and regulations.
