PIC16(L)F15354/55 Family
Silicon Errata and Data Sheet Clarifications

The PIC16(L)F15354/55 family devices that you have received conform functionally to the current Device Data Sheet (DS40001853**C**), except for the anomalies described in this document.

The silicon issues discussed in the following pages are for silicon revisions with the Device and Revision IDs listed in Table 1. The silicon issues are summarized in Table 2.

The errata described in this document will be addressed in future revisions of the PIC16(L)F15354/55 silicon.

Note:	This document summarizes all silicon errata issues from all revisions of silicon, previous as well as current. Only the issues indicated in the last column of Table 2 apply to the current silicon revision (**A3**).

Data Sheet clarifications and corrections start on page 5, following the discussion of silicon issues.

The silicon revision level can be identified using the current version of MPLAB® X IDE and Microchip's programmers, debuggers, and emulation tools, which are available at the Microchip corporate website (www.microchip.com).

For example, to identify the silicon revision level using MPLAB X IDE in conjunction with a hardware debugger:

1. Using the appropriate interface, connect the device to the hardware debugger.
2. Open an MPLAB X IDE project.
3. Configure the MPLAB X IDE project for the appropriate device and hardware debugger.
4. For MPLAB X IDE, select *Window > Dashboard* and click the **Refresh Debug Tool Status** icon ( ).
5. Depending on the development tool used, the part number *and* Device Revision ID value appear in the **Output** window.

Note:	If you are unable to extract the silicon revision level, please contact your local Microchip sales office for assistance.

The DEVREV values for the various PIC16(L)F15354/55 silicon revisions are shown in Table 1.

TABLE 1: SILICON DEVREV VALUES

PIC16F15355	30AEh	2002h	2003h
PIC16LF15355	30AFh	2002h	2003h

Note 1: The Device IDs (DEVID and DEVREV) are located at addresses 8006h and 8005h, respectively. They are shown in hexadecimal in the format "DEVID DEVREV".

2: Refer to the *"PIC16(L)F153XX Memory Programming Specification"* (DS40001838) for detailed information on Device and Revision IDs for your specific device.

Silicon Errata Issues

Note: This document summarizes all silicon errata issues from all revisions of silicon, previous as well as current. Only the issues indicated by the shaded column in the following tables apply to the current silicon revision (**A2**).

1. Module: Analog-to-Digital Converter (ADC)

1.1 ADC Positive Voltage Reference

Using the FVR as the positive voltage reference to the ADC can cause an increase in missing codes.

Work around

1. Increase the bit conversion time, known as TAD, to 8 us.
2. Use VDD as the positive voltage reference to the ADC.

X	X						

2. Module: Development Support

2.1 Data Breakpoints

Data breakpoints are not available on Banks 32 through 63. Any breakpoints that are placed in Banks 32 through 63 will fail to be recognized.

Work around

None.

3. Module: Windowed Watchdog Timer (WWDT)

3.1 WWDT Clock Source Selection

When the WDTCS <2:0> bits of the WDTCON1 register are set to 'b010', selecting the Secondary Oscillator SOSC 32 kHz, as the clock source, the WWDT does not operate.

Work around

Use the LFINTOSC or MFINTOSC clock sources for the WWDT.

X							

4. Module: Electrical Specifications

4.1 Minimum VDD Specifications for LF Devices

VDDMIN at -40°C to +25°C = 2.3V. (See **TABLE 37-1: Supply Voltage** on the following page for reference.)

Work around

None

Affected Silicon Revisions

4.2 Fixed Voltage Reference (FVR) Accuracy

At temperatures below -20°C, the output voltage for the FVR may be greater than the levels specified in the data sheet. This will apply to all three gain amplifier settings (1X, 2X, 4X). The affected parameter numbers found in the data sheet are: FVR01 (1X gain setting), FVR02 (2X gain setting), and FVR03 (4X gain setting).
