Precautions

- 1. Do not touch the lens with any sharp object.
- 2. No stress should be applied on the lens.

- 3. Thermal grease between the light bar and heat sink is recommended to fill air gaps for better thermal conductivity.
- 4. For securing the LED light bar, M2 screws are recommended. The light bar should not be bent or stressed in any way which could damage the internal circuit.

- 5. To prevent damages caused by electrostatic discharge (ESD), it is recommended to wear proper gear such as wristband or anti-static gloves when handling the product.
- 6. Constant current source is recommended to power the light bar. When more than one light bar are used, they should be connected in series if possible.
- 7. Thermal management should be taken into consideration when using the product. Maximum driving current should be reduced accordingly at higher ambient temperature to prevent overheating.
- 8. Soldering recommendations:
 - Soldering iron power should not exceed 40W, and should not be in contact with the joint for more than 3.5 secs.
 - The maximum soldering temperature should be less than 350°C.
 - Do not touch the product immediately after soldering.
 - Not reflow compatible.

KASL-4805 Application Note

Introduction

The KASL-4805 LED light bar provide very high light output, and can be configured to suit a wide rage of applications. However the heat generated during operation, if not handled properly, could shorten the product life significantly. Therefore for optimal performance, proper thermal management should be incorporated to keep it below the rated temperature. This document describes the heat sink attachment procedure.

Attachment to Heat sink

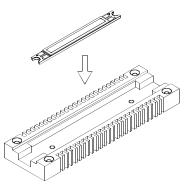

1. Apply a thin layer (0.1 ~ 0.2 mm) of thermal grease on the bottom of the KASL-4805 LED light bar .

Rear surface

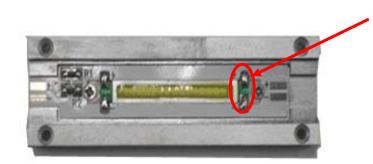

Thermal glue on rear surface

2. Press the KASL-4805 LED light bar firmly on the heat sink to ensure good contact between the heat sink and the LED light bar . A guide for heat sink size selection at various driving currents is listed in the table below.

3. A specifically designed electronic circuit is required to power the LED light bar . Do not connect the product directly to the main power.

Current (mA)	350	500	600	700
Heat sink surface area (mm ²)	10,000	15,000	17,000	21,000

It is strongly recommended that temperature of pad be not highter than 75°C when you use the product.
