## Watertight Miniature Snap Action Switch

- High-quality watertight, high-precision miniature Snap Action switch. Meets IP67 (IEC 529) requirements (for lead wire types) and IP50 (for terminal types)
■ Monoblock construction assures high sealing capability and is ideal for dusty places or where water is sprayed
- V-series internal mechanism assures high operating-position accuracy ( $\pm 0.4 \mathrm{~mm}$ ) and long life (10 million operations)
- Wide operating temperature range of $-40^{\circ} \mathrm{C}$ to $90^{\circ} \mathrm{C}$ is ideal for any operating
 environment
- General-load (5 A at 250 VAC) models and micro-load models are available

Note: 1. The above current ratings are the values of the steady-state current.
2. Inductive load has a power factor of 0.7 min . (AC) and a time constant of 7 ms max. (DC).
3. Lamp load has an inrush current of 10 times the steady-state current.
4. Motor load has an inrush current of 6 times the steady-state current.
5. Rating for UL/CSA approval is as follows: D2VW-01: 0.1A, 125 VAC

## Precautions

## MOUNTING

Use two M3 mounting screws with spring washers to mount the switch. Tighten the screws to a torque of 0.39 to $0.59 \mathrm{~N} \cdot \mathrm{~m}$ ( 4 to $6 \mathrm{kgf} \cdot \mathrm{cm}$ ).

## Mounting holes

## OPERATIONS

Make sure that the switching object is perfectly separated from the actuator when the switch is not operated and the actuator is pressed appropriately by the switching object when the switch is operated.
The switch should be set so that its stroke will be within the rated OT when the switch is operated.
Install the switching object so that its moving direction is the same as that of the actuator.

## - ENCLOSURE RATINGS

The D2VW was tested under water and passed the following watertightness test, which however, does not mean that the D2VW can be used in the water.

JIS C0929 (rules for testing the watertightness of electrical devices and materials), class 7 (watertightness test). Refer to the following illustration for the test method at OMRON.

Note: The object to be tested is left in the water for 30 minutes on condition that the distance between the surface of the water and the top of the object be 15 cm minimum and the distance between the surface of the water and the bottom of the object be 1 m minimum.
