

# TX-1446

## HAND HELD RADIO WITH LCD

PMR-446

### HANDY AND COMPACT

The new TX-1446 is the ideal radio for reliable communications in the toughest environments by combining the key requirements of business, commercial and high-end users: convenience, reliability, durability, functionality and performance. No other compact professional PMR446 radio can deliver so much versatility and functionality.

#### • MENU DRIVEN CONFIGURATION SYSTEM

The TX-1446 is both easy to operate and highly adaptable, through the use of a user-friendly menu driven configuration system. This allows a great depth of control, without the need for PC programming or control software. The large LCD display keeps the user fully informed of the radio settings at all times. In addition, the rotary volume and on/off control, tactile PTT and other controls, make operation extremely straightforward.

#### • SMART CHARGING SYSTEM

Each radio is supplied with an intelligent desk top charger which optimises the battery charge process and notifies the user when charging is complete - maximising battery life and avoiding the uncertainty associated with traditional charger designs.

#### • LIGHT WEIGHT, BUT LONG LIFE SPAN

The high capacity (1000 mAh) Lithium Ion battery supplied delivers reliable communications for up to 16 hours, whilst minimising the unit size and weight - just 185g including the battery.

#### • EXTENDED RANGE

Communication range is exceptional - up to 6km\* or more subject to terrain and other conditions.

For demanding communications, demand the best - the TX-1446.

\* Subject to terrain and other operating conditions
