Remote Control Module for VXI

VIEW PRODUCT DETAILS

Provides PC-based remote control of VXI systems.

The Remote Control Module for VXI is a flexible, high-performance solution for stand-alone computer control of VXI systems. The module allows your computer to perform as if it were plugged directly into the VXI backplane, giving your host computer the capability of an embedded computer. PC systems equipped with this module combine a high-bandwidth, low-latency interface with low-cost desktop computers or laptops for a cost-effective, high-performance solution. With the Remote Control Module for VXI as your control solution, you can upgrade your PC while using the same high-speed VXIbus interface.
