

EVM54504-BS-00A

5A, 16V, 4-Channel Output, Step-Down Power Module with Internal Auto-Compensation Evaluation Board

DESCRIPTION

The EVM54504-BS-00A is an evaluation board designed to demonstrate the capabilities of the MPM54504, a four-channel output, step-down power module. Each channel can deliver up to 5A of continuous output current across a wide input voltage range (3V to 16V), with excellent load and line regulation. The MPM54504 integrates monolithic power stages and inductors that support passive components to achieve high efficiency.

The MPM54504 features internal auto-compensation, and does not require any external compensation components.

Constant-on-time (COT) control provides fast load transient response, simple loop design, and tight output regulation.

The MPM54504's protection features include short-circuit protection (SCP), over-current protection (OCP), over-voltage protection (OVP), under-voltage protection (UVP), over-temperature protection (OTP), and thermal shutdown (TSD).

The MPM54504 is available in a FCMBGA (9mmx15mmx5mm) package.

ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Value	Units
Input voltage	V_{IN}	12	V
Output voltage (channels 1, 2, 3, and 4)	V_{OUT}	3.3, 2.5, 1.5, 1.2	V
Output current (channels 1, 2, 3, and 4)	I_{OUT}	5, 5, 5, 5	A

FEATURES

- Wide 3V to 16V Operating Input Voltage Range
- 0.6 to 5.5V Output Voltage
- Continuous Output Current (I_{OUT})
 - Four-Channel Output
 - 5A I_{OUT} per Channel
- Constant-On-Time Control (COT) for Fast Transient Response
- Internal Auto-Compensation
- Configurable External Soft-Start (SS) Time
- Enable (EN) and Power Good (PG) for Power Sequencing
- Protection Features: Over-Voltage Protection (OVP), Under-Voltage Protection (UVP), Over-Current Protection (OCP), Short-Circuit Protection (SCP), Over-Temperature Protection (OTP), Thermal Shutdown (TSD)
- Available in a FCMBGA (9mmx15mmx5mm) Package

APPLICATIONS

- Field-Programmable Gate Arrays (FPGAs)
- Digital Signal Processors (DSPs)
- Application-Specific Integrated Circuits (ASICs)
- Multi-Rail Point-of-Load (POL) Power Systems

QUICK START GUIDE

1. Preset the power supply between 3V and 16V, then turn off the power supply.
2. Connect the power supply terminals to:
 - a. Positive (+): VIN
 - b. Negative (-): GND
3. Connect the load terminals ($\leq 5A$) of channels 1, 2, 3, and 4 to:
 - a. Positive (+): VOUT
 - b. Negative (-): GND
4. After making the connections, turn on the power supply. The board should automatically start up.
