

Title	Reference Design Report for a >92% Efficient 75 W Power Factor Corrected LED Driver Using LinkSwitch™-PH LNK420EG
Specification	190 VAC – 300 VAC Input; 29 V – 36 V, 2.1 A Output
Application	LED Driver for Industrial High Bay Light
Author	Applications Engineering Department
Document Number	RDR-290
Date	October 12, 2012
Revision	1.2

Summary and Features

- Single-stage combined power factor correction and accurate constant current (CC) output
- Low cost, low component count and small PCB footprint
- Highly energy efficient, >92 % at 230 VAC input; 36 V LED
- Fast start-up time (<300 ms) – no perceptible delay
- Integrated protection features
 - Single shot no-load latching protection / output short-circuit protected with auto-recovery
 - Auto-recovering thermal shutdown with large hysteresis protects both components and printed circuit board
 - No damage during brown-out conditions
 - PF >0.95 at 230 VAC
 - Meet Class C Harmonics Limits EN61000-3-2
 - Meet EN55015 conducted EMI
 - %A THD <20% at 230 VAC
- Meets IEC ring wave (2.5 kV), differential line surge (2 kV), common mode line surge (4 kV) and EN55015 conducted EMI

PATENT INFORMATION

The products and applications illustrated herein (including transformer construction and circuits external to the products) may be covered by one or more U.S. and foreign patents, or potentially by pending U.S. and foreign patent applications assigned to Power Integrations. A complete list of Power Integrations' patents may be found at www.powerint.com. Power Integrations grants its customers a license under certain patent rights as set forth at <<http://www.powerint.com/ip.htm>>.

Important Note:

Although this board is designed to satisfy safety requirements for non-isolated LED driver, the engineering prototype has not been agency approved. Therefore, all testing should be performed using an isolation transformer to provide the AC input to the prototype board.

1 Introduction

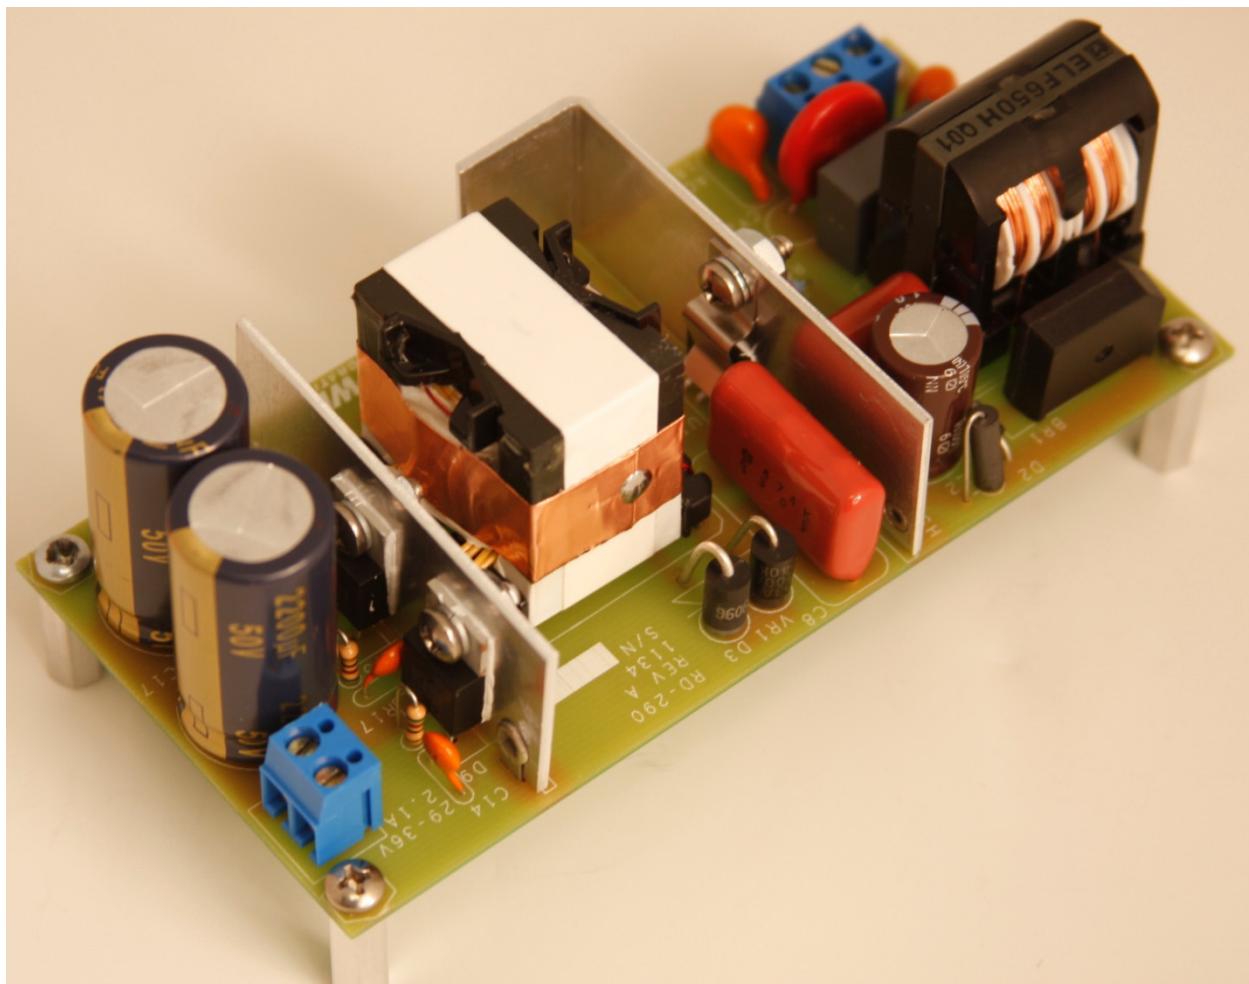

This document is an engineering report describing an isolated LED driver (power supply) utilizing a LNK420EG from the LinkSwitch-PH family of devices.

The RD-290 provides a single constant current output of 2.1 A over an LED string voltage of 29 V to 36 V in a highly efficient, simple and low component count design.

The board was optimized to operate over the high AC input voltage range (190 VAC to 300 VAC, 47 Hz to 63 Hz). LinkSwitch-PH based designs provide a high power factor (>0.95) with low harmonic current content, easily meeting international limits.

The form factor of the board was chosen to illustrate the simplicity of fitting into standard down light applications.

The document contains the power supply specification, schematic, bill of materials, transformer documentation, printed circuit layout, and performance data.

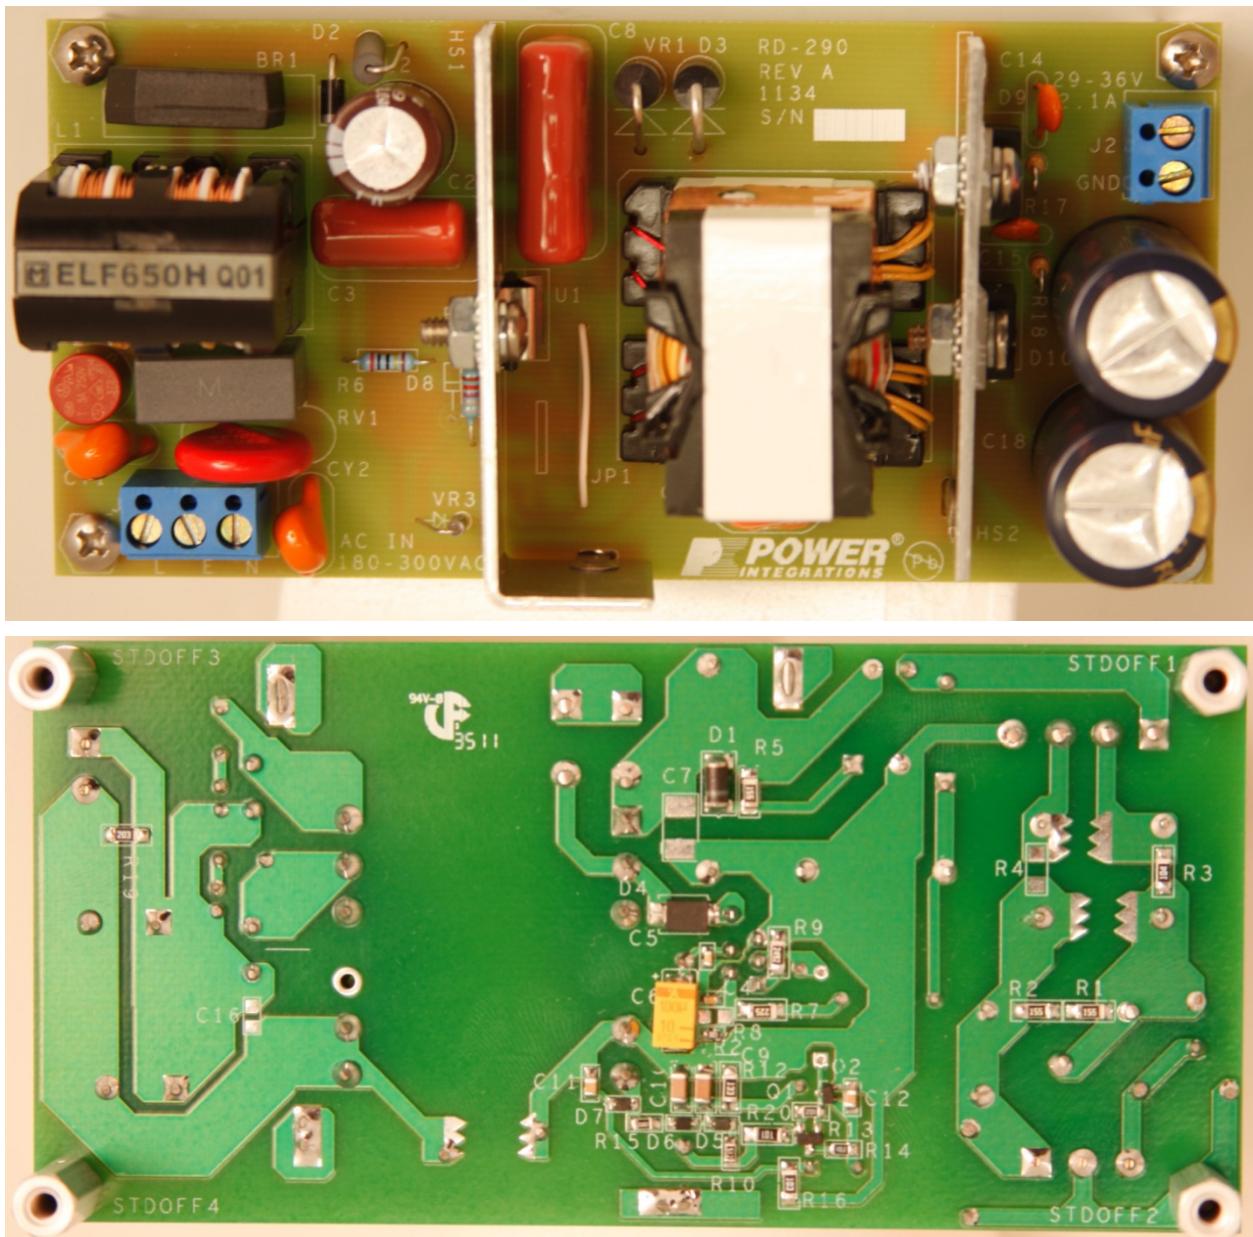

Figure 1 – Populated Circuit Board Photograph.

2 Power Supply Specification

The table below represents the minimum acceptable performance of the design. Actual performance is listed in the results section.

Description	Symbol	Min	Typ	Max	Units	Comment
Input						
Voltage	V_{IN}	190		300	VAC	2 Wire – no P.E.
Frequency	f_{LINE}	47	50/60	63	Hz	
Power Factor		0.95				
%ATHD				20		At any line input voltage EN61000-3-2(c)
Output						
Output Voltage	V_{OUT}	29	32	36	V	
Output Current	I_{OUT}	1.95	2.1	2.25	A	
Total Output Power	P_{OUT}		75		W	
Efficiency						
Nominal	η		92		%	Measured at 32 V, 2.1 A, 25 °C, 230 VAC
Environmental						
Conducted EMI				Meets CISPR22B / EN55015		
Line Surge						
Differential Mode (L1-L2)			2		kV	1.2/50 μ s surge, IEC 1000-4-5, Series Impedance: Differential Mode: 2 Ω
Common Mode						
(L1-PE,L2-PE)			4		kV	Differential Mode: 12 Ω
Ring Wave (100 kHz)						
Differential Mode (L1-L2)			2.5		kV	2 Ω short-circuit Series Impedance
Harmonic Currents			Meets EN61000-3-2 Class C			
Internal Ambient Temperature	T_{AMB}	0		70	°C	Board level, free convection, sea level

3 Schematic

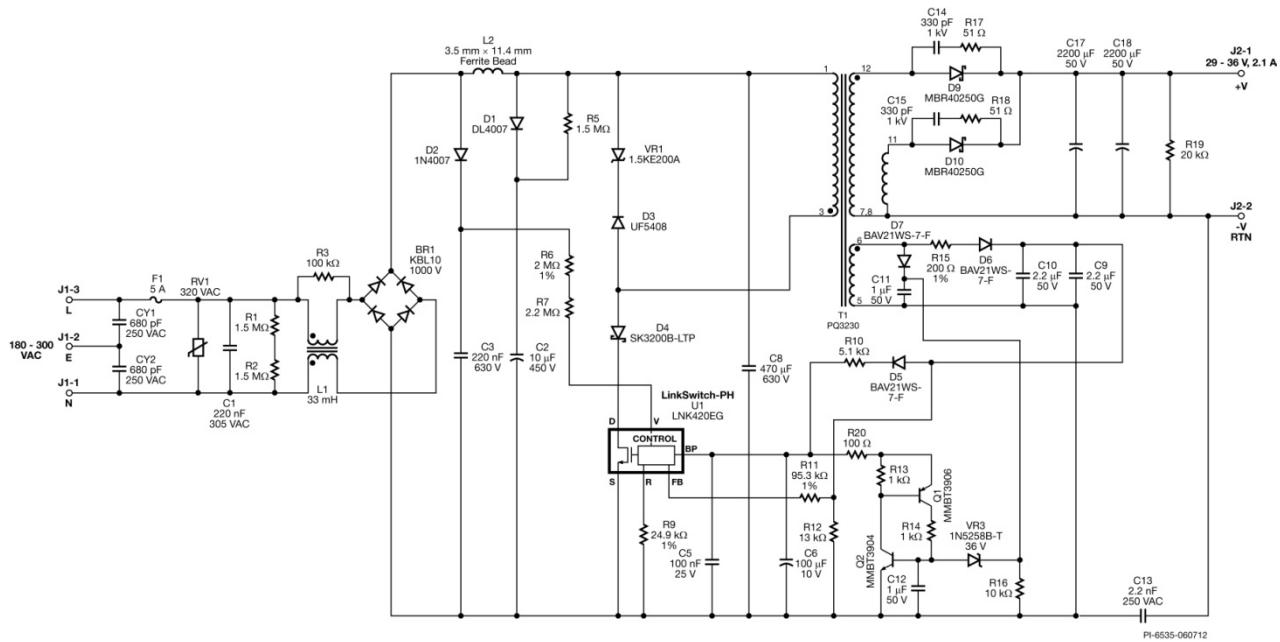

Figure 2 – Schematic.

4 Circuit Description

The LinkSwitch-PH (U1) is a highly integrated primary side controller intended for use in isolated LED driver applications. The LinkSwitch-PH provides high efficiency, high power factor and low THD in a single-stage conversion topology while regulating the output current over a wide range of input (180 VAC – 300 VAC) and output voltage variations typically found in LED driver application environments. All of the control circuitry necessary for these functions plus the high-voltage power MOSFET is incorporated into the device.

4.1 Input EMI Filtering

The AC supply to the LED driver is protected by fuse. The system input voltage is limited by RV1, D1, R5 and C2 during differential mode line surge voltage events.

The AC input is rectified by BR1. Minimal filter capacitance is used in order to achieve high power factor, low THD and low input current harmonics. Capacitor C8 provides a low impedance source for the primary switching currents.

Capacitor C1, common-mode choke L1, and differential choke L2, perform EMI filtering while maintaining high-power factor. This input filter network plus the frequency jittering feature of LinkSwitch-PH allows compliance to Class B emission limits. Resistor R3 is used to damp the resonance of the EMI filter, preventing peaks in the conducted EMI spectrum.

Capacitors CY1 and CY2 and C13 provide EMI filtering, reducing common mode conducted EMI currents.

4.2 Flyback Using LinkSwitch-PH

Diode D2 and C3 detect the peak AC line voltage. This voltage is converted to a current into the VOLTAGE MONITOR (V) pin via R6 and R7. This current is also used by the device to set the input over/under voltage protection thresholds and to provide a linear relationship between input voltage and the output current.

The V pin current and the FEEDBACK (FB) pin current are used internally to control the average output LED current. Constant current (CC) non-dimming applications require $24.9 \text{ k}\Omega \pm 1\%$ resistance (R9) on the REFERENCE (R) pin.

Diode D6, C9, C10, and R15, create the primary bias supply. This bias voltage is rectified and filter through D6 and C10 respectively. R15 filters the high frequency due to leakage which improves emi and regulation. The supply is used to supply current into the BYPASS (BP) pin through D5 and R10. Capacitors C6 and C5 serve as decoupling capacitors for the BP pin. Capacitor C6 is charged via an internal high-voltage current source connected to the DRAIN (D) pin of U1. This provides the energy to operate U1 until the bias voltage rises and supplies enough current can be provided via D5.

The output voltage is sensed via R11 which feeds a current in the FB pin proportional to the bias voltage. The bias is related to the output voltage via the bias to output winding turns ratio.

Diode D3 and VR1 clamp due to leakage inductance generated voltage spikes on the drain to a safe level. Diode D4 is necessary to prevent reverse current from flowing through the LinkSwitch-PH device.

- D4 is low drop diode (Schottky) selected to achieve good efficiency.
- T1 core size, winding construction and wire gauge are optimized to minimize inter-winding capacitance and low AC loss to achieve good efficiency.

4.3 Output Rectification

Diodes D9 and D10 rectify the secondary winding while capacitors C17 and C18 filter the output. The anode of rectifier diodes are connected to dedicated transformer output windings to assure current sharing. Dedicated RC clamping circuits are placed across each output diode to reduce voltage stress and to limit ringing, reducing radiated and conducted noise.

- Diodes D9 and D10 are low drop diodes (Schottky), selected to improve efficiency.

4.4 Protection

The system is protected by a latching over-voltage circuit (D7, C11, C12, VR3, Q1, Q2, R13, R14, R16 and R20). A separate bias voltage was used (via D7 and C11) to reduce the time for the OVP to trigger. Resistor R20 prevents the BP pin being pulled to below ~2 V which limits the dissipation of U1 when the latch is triggered. The OVP circuit operates if the load is not connected and prevents catastrophic failure of the output capacitor. The latch can only be reset by recycling the AC input.

The device is thermally protected in case the system is operated above the specified temperature range.

5 PCB Layout

7 Transformer Specification

7.1 Electrical Diagram

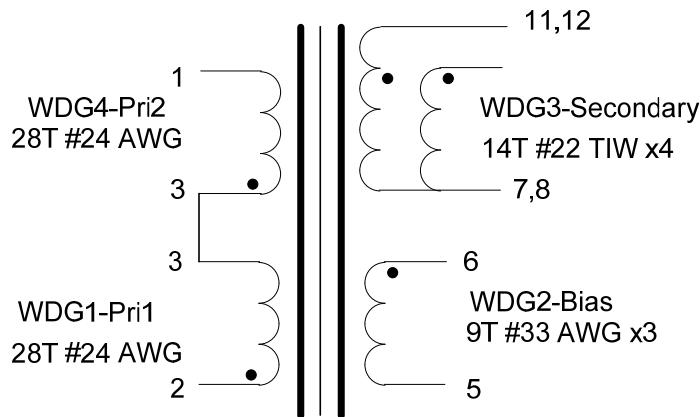

Figure 5 – Transformer Electrical Diagram.

7.2 Electrical Specifications

Electrical Strength	1 second, 60 Hz, from pins 1-6 to pins 7-12	3000 VAC
Primary Inductance	Pins 1-2, all other windings open, measured at 100 kHz, 0.4 V _{RMS}	1207 µH, ±10%
Resonant Frequency	Pins 1-2, all other windings open	1400 kHz (Min.)
Primary Leakage Inductance	Pins 1-2, with pins 6-7 shorted, measured at 100 kHz, 0.4 V _{RMS}	15.0 µH (Max.)

7.3 Materials

Item	Description
[1]	Core: PC44; PQ3230
[2]	Bobbin: RPQ3230 Vertical, 6/6 Pins
[3]	Magnet Wire: #24 AWG
[4]	Magnet Wire: #33 AWG
[5]	Magnet Wire: #22 AWG Triple-insulated Wire
[6]	Tape: 3M 1298 Polyester Film, 17.7 mm width
[7]	Tape: 3M 1298 Polyester Film, 36 mm width
[8]	Tape: 3M 1298 Polyester Film, 10 mm width
[9]	Copper Tape: 12 mm
[10]	Varnish

7.4 Transformer Build Diagram

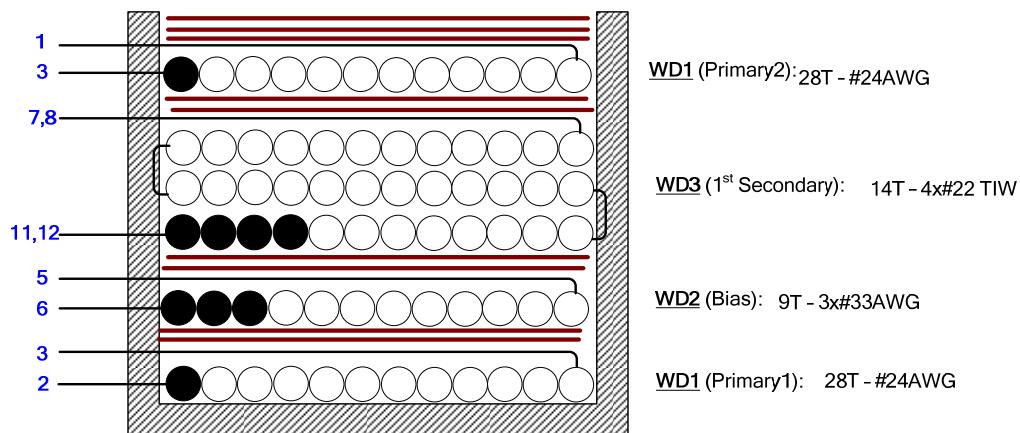

Figure 6 – Transformer Build Diagram.

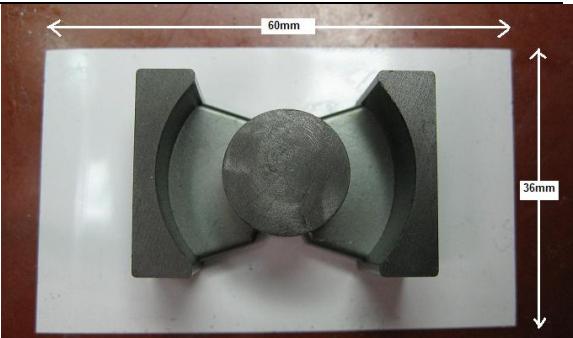

7.5 Transformer Construction

Bobbin Preparation	Pull-out pin number 4. Position the bobbin such that the pins are on the left side of the bobbin chuck. Machine rotates in forward direction.
WDG1 Primary 1	Start at pin 2; wind with firm tension 28 turns of item [3] from left to right. Finish at pin 3.
Insulation	2 layers of tape [6] for insulation.
WDG2 Bias	Start at pin 6; wind with firm tension 9 trifilar turns of item [4] from left to right. Finish at pin 5.
Insulation	2 layers of tape [6] for insulation.
WDG3 Secondary	Start in 2 wires per pin at pin 11 and 12; wind with firm tension 14 quadfilar turns of item [5] in continuously in three layers. Finish at pin 7 and 8. Termination is 2 wires per pin.
Insulation	2 layers of tape [6] for insulation.
WDG4 Primary 2	Start at pin 3; wind with firm tension 28 turns of item [3] from left to right. Finish at pin 1.
Insulation	3 layers of tape [6] for insulation.
Taping	Add 1 layer of tape [7] on the bottom side of the transformer to isolate the core to secondary and primary pins. Refer to figures below:
Assemble Core	Assemble and secure the cores with 3 layers of tape [8]
Copper Shield	Add 1 turn of copper shield around the core legs as shown in the illustration.
Finish	Varnish transformer assembly.

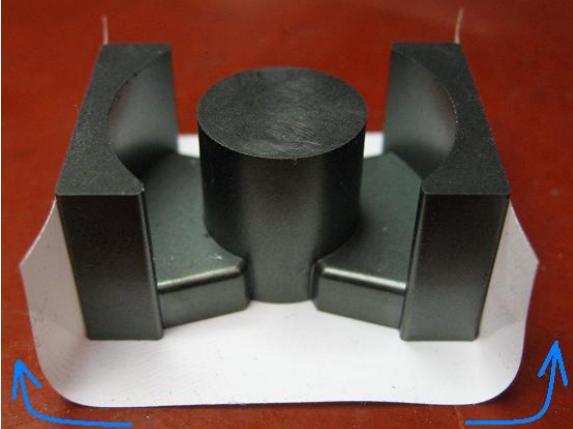

7.6 Transformer Core Wrapping Process

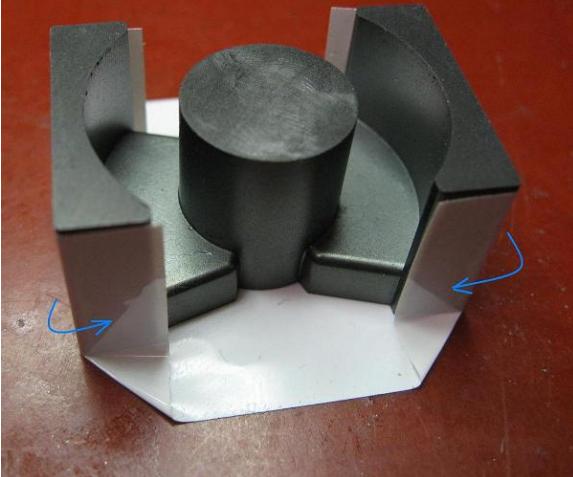

Step 1. Position the core at the center of 60 mm x 36 mm polyester film tape [7]

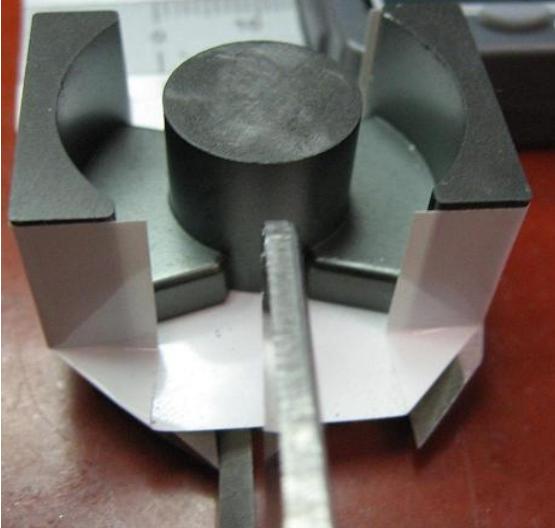

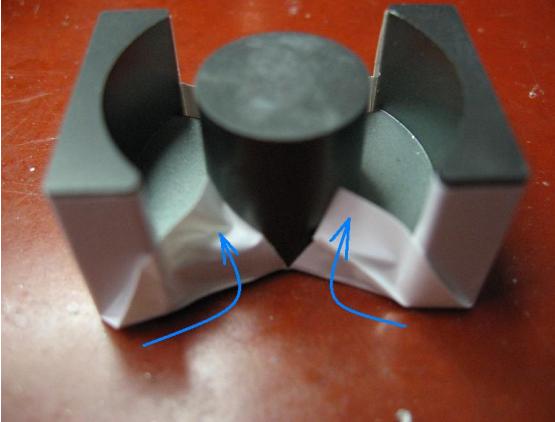

Step 2. Fold both ends of the tape into the sides of the core as shown in the illustration. Make sure that no excess tape higher than the core.

Step 3. Fold the tape in the 4 corners of the core. Extend the folding down to the bottom of the tape until it locks.

	
<p>Step 4. Cut the center of the bottom tape on its 2 sides.</p>	
<p>Step 5. Fold the tape into the legs of the core as shown in the illustration. Same procedure is applied to the other side of the core.</p> <p>Step 6. Insert the wrapped core into the bottom side of the bobbin. Make sure that the tape is inserted between the core and the bobbin as shown in the figure.</p>	

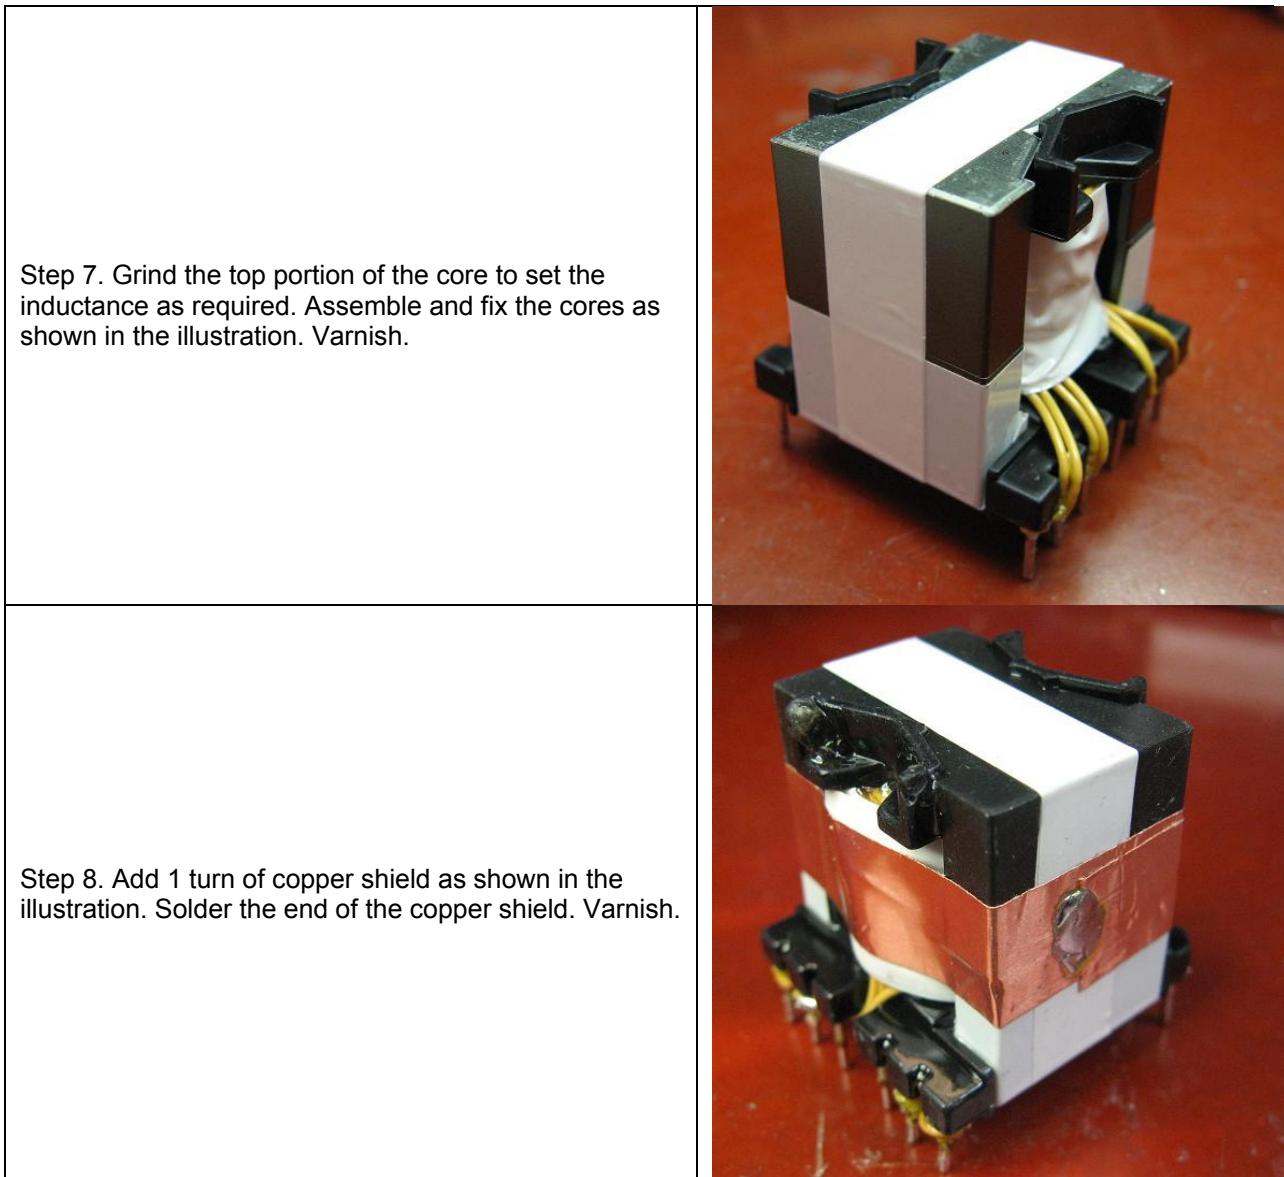

Figure 7 – Core Wrapping and Shielding Illustration.

Lumped parameters					
ISP			8.83	A	Peak Secondary Current
ISRMS			3.80	A	Secondary RMS Current
IRIPPLE			3.17	A	Output Capacitor RMS Ripple Current
CMS			760	Cmils	Secondary Bare Conductor minimum circular mils
AWGS			21	AWG	Secondary Wire Gauge (Rounded up to next larger standard AWG value)
DIAS			0.73	mm	Secondary Minimum Bare Conductor Diameter
ODS			1.21	mm	Secondary Maximum Outside Diameter for Triple Insulated Wire
VOLTAGE STRESS PARAMETERS					
VDRAIN			692	V	Estimated Maximum Drain Voltage assuming maximum LED string voltage (Includes Effect of Leakage Inductance)
PIVS			146	V	Output Rectifier Maximum Peak Inverse Voltage (calculated at VOVP, excludes leakage inductance spike)
PIVB			92	V	Bias Rectifier Maximum Peak Inverse Voltage (calculated at VOVP, excludes leakage inductance spike)
FINE TUNING (Enter measured values from prototype)					
V pin Resistor Fine Tuning					
RV1			4.00	M-ohms	Upper V Pin Resistor Value
RV2			1.40	M-ohms	Lower V Pin Resistor Value
VAC1			115.0	V	Test Input Voltage Condition1
VAC2			230.0	V	Test Input Voltage Condition2
IO_VAC1			2.10	A	Measured Output Current at VAC1
IO_VAC2			2.10	A	Measured Output Current at VAC2
RV1 (new)			4.00	M-ohms	New RV1
RV2 (new)			1.40	M-ohms	New RV2

V_OV			325.6	V	Typical AC input voltage at which OV shutdown will be triggered
V_UV			72.4	V	Typical AC input voltage beyond which power supply can startup
FB pin resistor Fine Tuning					
RFB1	93.1		93.1	k-ohms	Upper FB Pin Resistor Value
RFB2	1.30E+01		1E+12	k-ohms	Lower FB Pin Resistor Value
VB1	19.01		16.0	V	Test Bias Voltage Condition1
VB2	19.13		20.0	V	Test Bias Voltage Condition2
IO1	2.394		2.10	A	Measured Output Current at Vb1
IO2	2.343		2.10	A	Measured Output Current at Vb2
RFB1 (new)			99.8	k-ohms	New RFB1
RFB2(new)			1.39E+01	k-ohms	New RFB2

11 Thermal Performance

11.1 Equipment Used

Chamber: Tenney Environmental Chamber
 Model No: TJR-17 942
 AC Source: Chroma Programmable AC Source
 Model No: 6415
 Wattmeter: Yokogawa Power Meter
 Model No: WT2000
 Data Logger: Monogram
 SN:1290492

Figure 13 – Thermal Chamber Set-up Showing Box Used to Prevent Airflow Over UUT.

11.2 Thermal Result

Load: 36 V / 2.08 A LED load

Normal Operation		Device Temperature (°C)					
Component		180 V / 50 Hz		230 V / 50 Hz		265 V / 50 Hz	
		Max	OTP	Max	OTP	Max	OTP
Box Internal Ambient (°C)		70.0	89.2	70.0	96.4	70.0	95.5
Transformer (T1)		81.1	105.4	80.9	105.9	84.8	109.8
Output Capacitor (C17)		78.2	96.5	74.4	100.5	77.4	102
Common Mode Choke (L1)		79.7	98.4	73.8	100.6	75.2	100.7
Bridge (BR1)		100.4	119.3	92.1	118.2	92.4	118.0
Snubber TVS (VR1)		100.1	119.5	94.4	119.8	93.3	118.6
LNK420EG (U1)		110.2	131.0	103.1	130.8	104.0	131.2
Output Diode (D9)		90.7	109.1	88.2	113.0	90.5	115.0
Output Diode (D10)		95.4	113.9	93.3	118.0	95.7	120.2

OTP: The ambient temperature was raised until the internal Over-Temperature-Protection of the IC (U1) triggered.

11.3 Thermal Scan

The scan is conducted at ambient temperature of 25°C, 180 VAC / 50 Hz input and 36 V LED string load.

Tel: +1 408 414 9200 Fax: +1 408 414 9201
www.powerint.com

12.7 Start-up No-load and Normal Operation then No-load

This LED driver is protected by latching OVP circuit and resettable through AC recycle. No component failure was observed.

12.8 Secondary Diode Voltage Stress

12.9 Line Surge Waveform

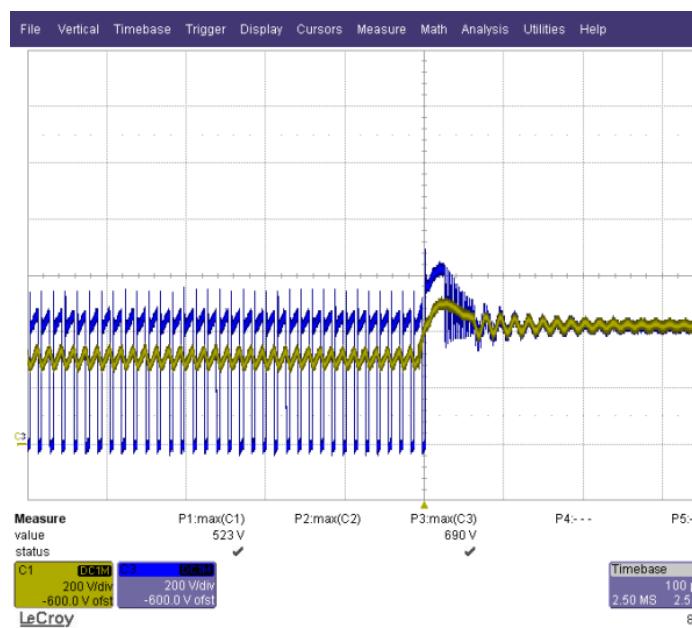

Figure 36 – 230 VAC / 60 Hz, 2 kV Differential Surge.

Voltage Stress (U1): 690 V.

Ch1: V_{BULK} , 200 V / div.

Ch3: V_{SOURCE} , 200 V / div., 100 μ s / div.

Power Integrations, Inc.

Tel: +1 408 414 9200 Fax: +1 408 414 9201
www.powerint.com

13 Line Surge

Input voltage was set at 230 VAC / 60 Hz. Output was loaded with 32 V LED string and operation was verified following each surge event.

Differential input line 1.2 / 50 μ s surge testing was completed on two test unit to IEC61000-4-5.

Surge Level (kV)	Input Voltage (VAC)	Injection Location	Injection Phase (°)	Test Result (Pass/Fail)
+2	230	L1 to L2	0	Pass
-2	230	L1 to L2	0	Pass
+2	230	L1 to L2	90	Pass
-2	230	L1 to L2	90	Pass
+4	230	L1-PE	0	Pass
-4	230	L1-PE	0	Pass
+4	230	L1-PE	90	Pass
-4	230	L1-PE	90	Pass
+4	230	L2-PE	0	Pass
-4	230	L2-PE	0	Pass
+4	230	L2-PE	90	Pass
-4	230	L2-PE	90	Pass

Differential input line ring surge testing was completed on two test unit to IEC61000-4-5.

Ring Surge Level (kV)	Input Voltage (VAC)	Injection Location	Injection Phase (°)	Test Result (Pass/Fail)
+2.5	230	L1 to L2	0	Pass
-2.5	230	L1 to L2	0	Pass
+2.5	230	L1 to L2	90	Pass
-2.5	230	L1 to L2	90	Pass

Unit was operating normally under all test conditions.

14 Conducted EMI

14.1 Equipment

Receiver:

Rohde & Schwartz
ESPI - Test Receiver (9 kHz – 3 GHz)
Model No: ESPI3

LISN:

Rohde & Schartz
Two-Line-V-Network
Model No: ENV216

14.2 EMI Test Set-up

LED driver is placed in a conical metal housing (for self-ballasted lamps; CISPR15 Edition 7.2).

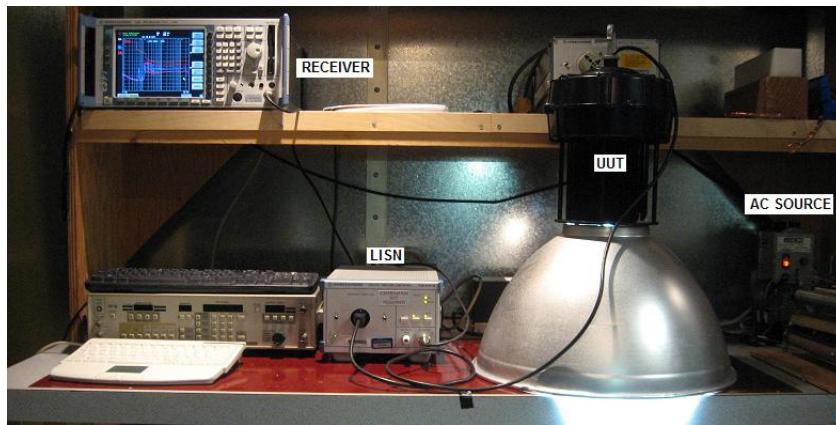

Figure 37 – Conducted Emissions Measurement Set-up.
Showing Down Light Fixture which UUT was Mounted.

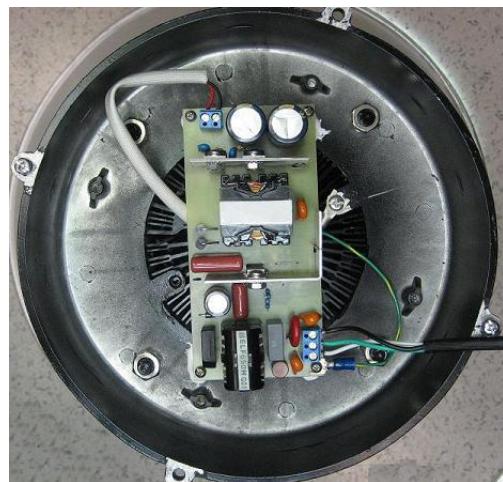

Figure 38 – UUT is Mounted Inside the Down Light Fixture in 3 Conditions: 3 Wire – Chassis Grounded to Earth, 3 Wire Chassis Floating and 2 Wire Connection.
