## 5V Power Management IC Evaluation Board

### DESCRIPTION

The EV5496-R-00A is an evaluation board for MP5496, a complete power management solution that integrates four high-efficiency, step-down, DC/DC converters, five low-dropout regulators, and a flexible logic interface.

A constant-on-time (COT) control DC/DC converter provides fast transient response. The 1.5MHz default fixed switching frequency during continuous conduction mode (CCM) reduces the external inductor and capacitor values greatly. Full protection features include under-voltage lockout (UVLO), over-current protection (OCP), and thermal shutdown.

The output voltage is adjustable through the I<sup>2</sup>C bus or pre-set by the one-time programmable (OTP) function. The power on/off sequence is also programmable by the OTP or can be controlled through the I<sup>2</sup>C bus online.

The MP5496 requires a minimal number of external components and is available in a space-saving, 28-pin QFN (4mmx4mm) package.

## QUICK START GUIDE

1. Connect the positive and negative terminals of the load to the VOUT and GND pins, respectively.
2. Preset the power supply output between 3.0V and 3.6V, and then turn off the power supply.
3. Connect the positive and negative terminals of the power supply output to the VIN and GND pins, respectively.
4. Turn the power supply on. The PMIC will automatically entry power on sequence.

**Notes:**

- 1) VOUT power terminals on EVB are including buck1-4; LDO1 to LDO5.
- 2) VIN1-4 terminals are shorten-circuit internally. Connect input DC voltage source to either of them is ok.
